ASSEMBLY MANUAL

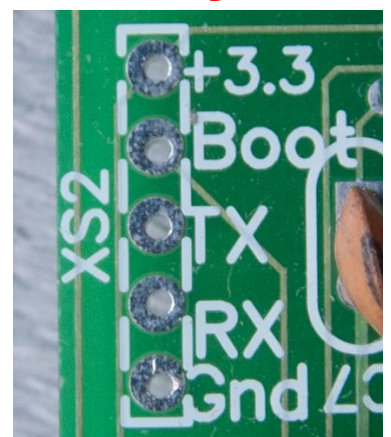

FOR

SONYA

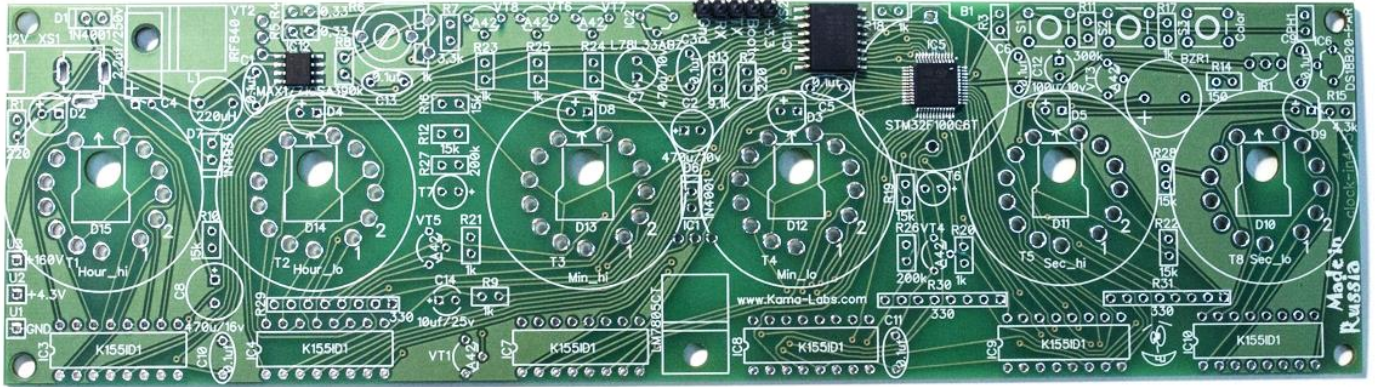

IN-4 v5 CLOCK

Be very careful with static electricity. If clock not work after build its mean that they been damaged by static electricity in process of assemble.

Check resistance between +3.3 and GND pins of XS2. The resistance should be more than 1kOhm.

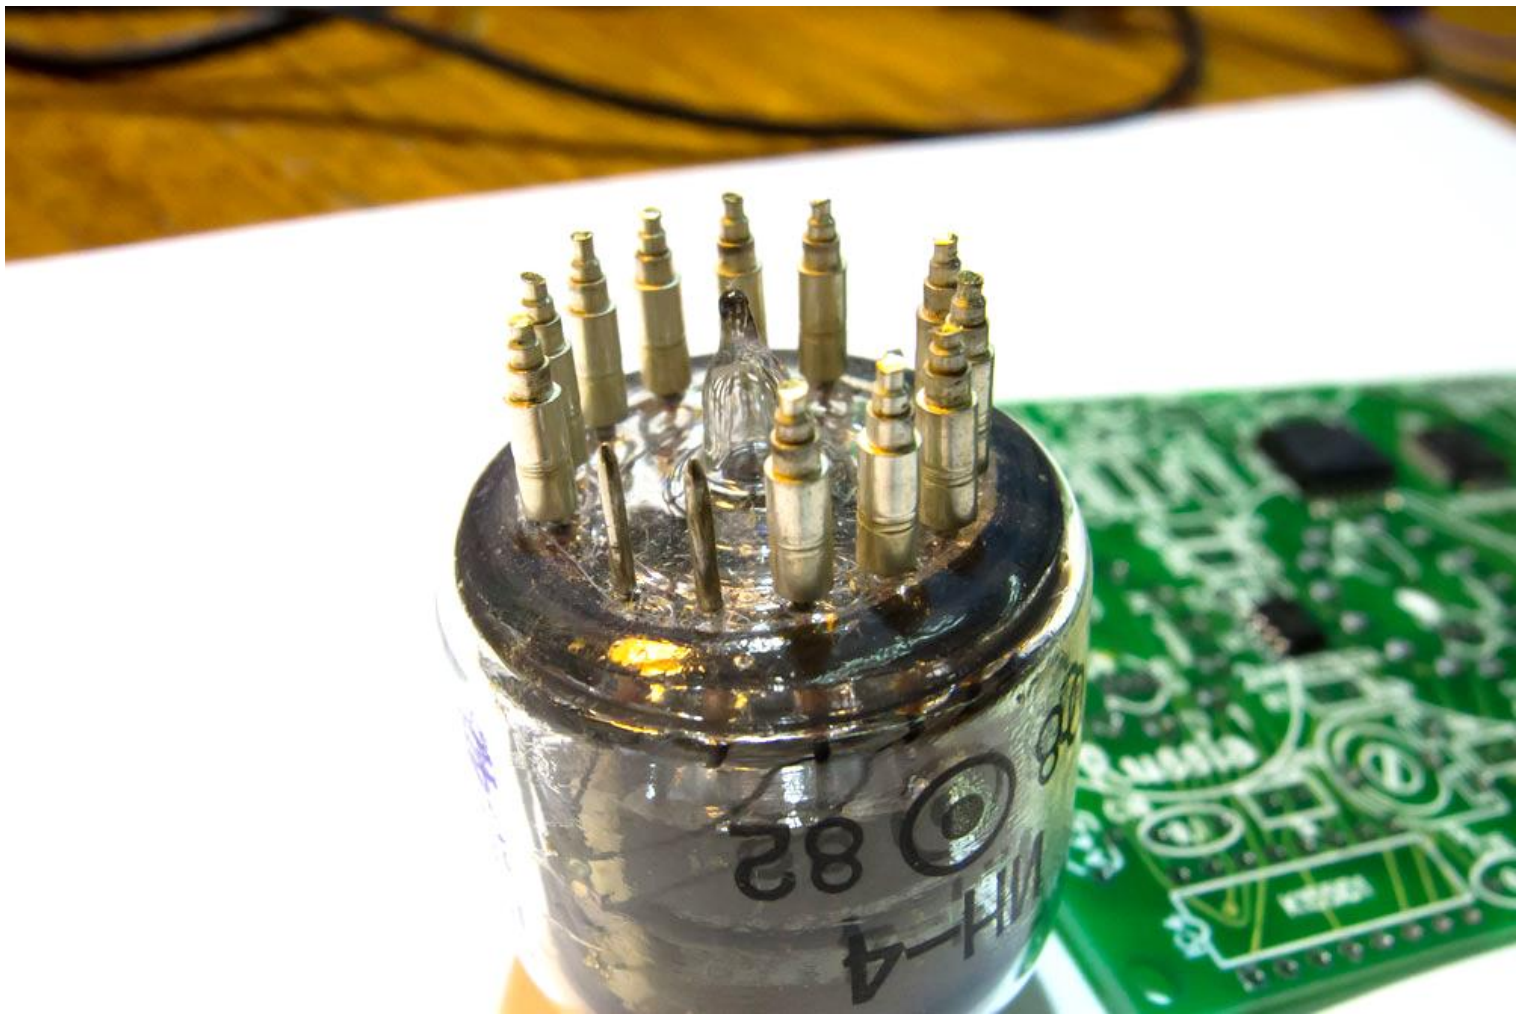

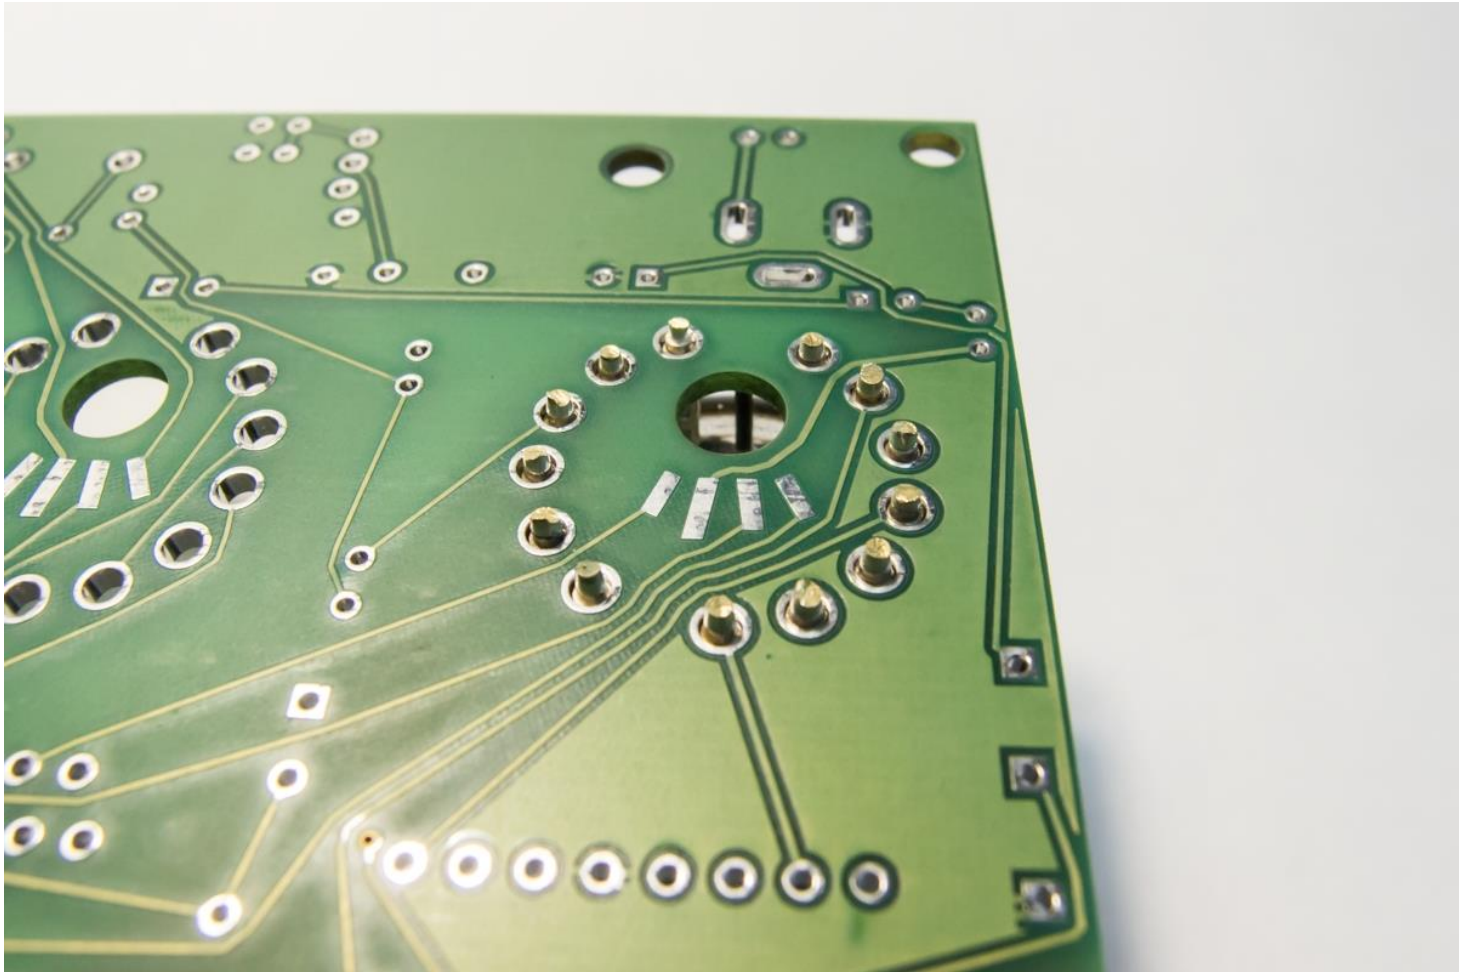

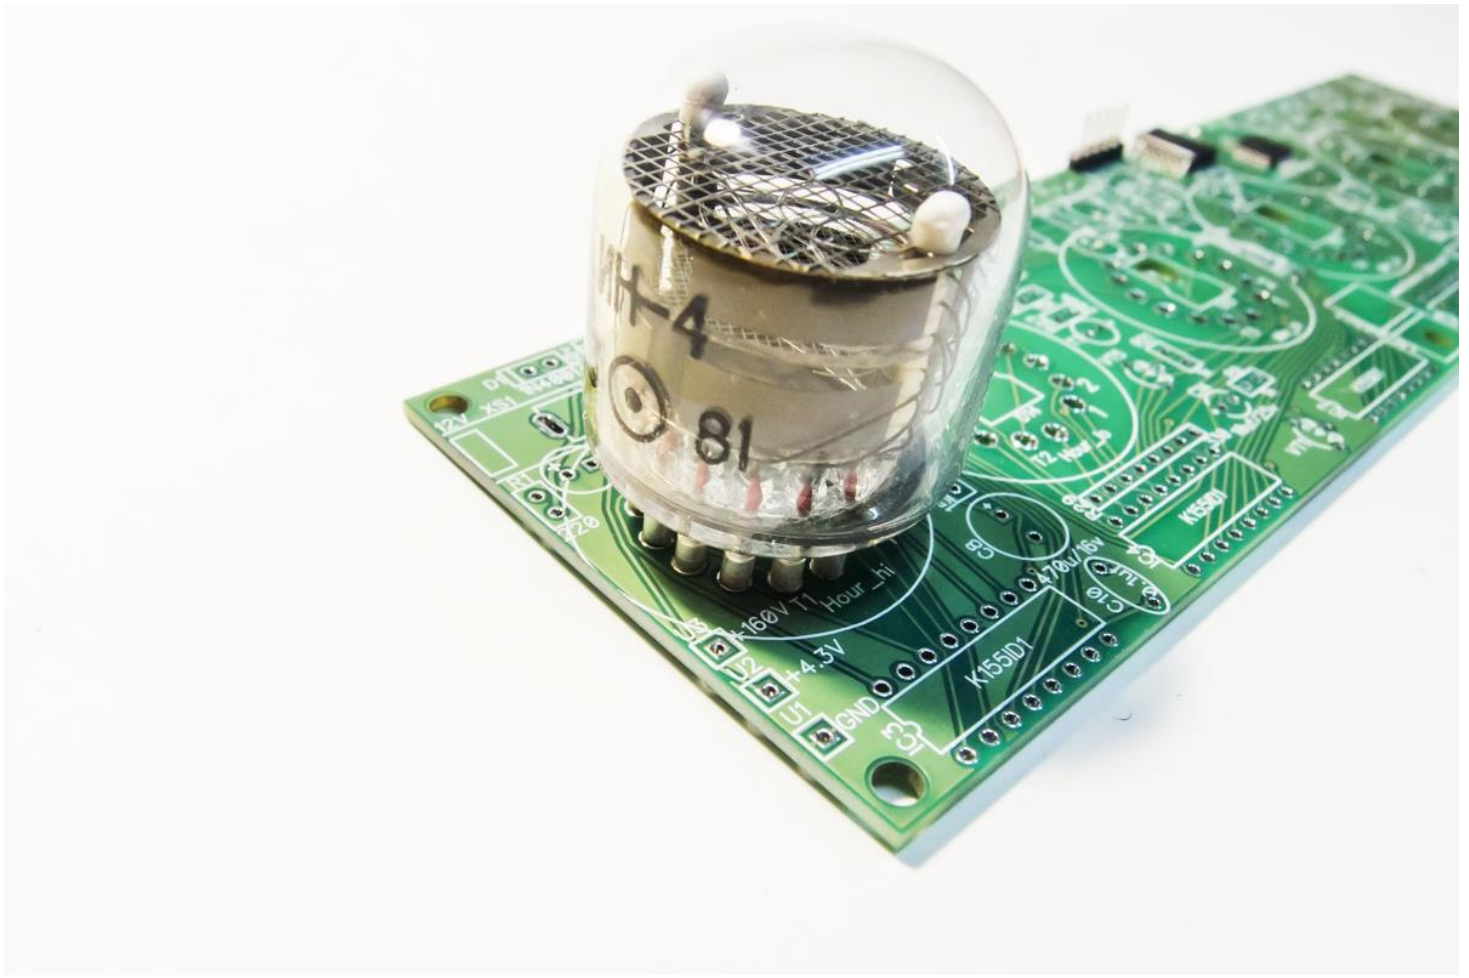

1) You have a PCB with ICs:

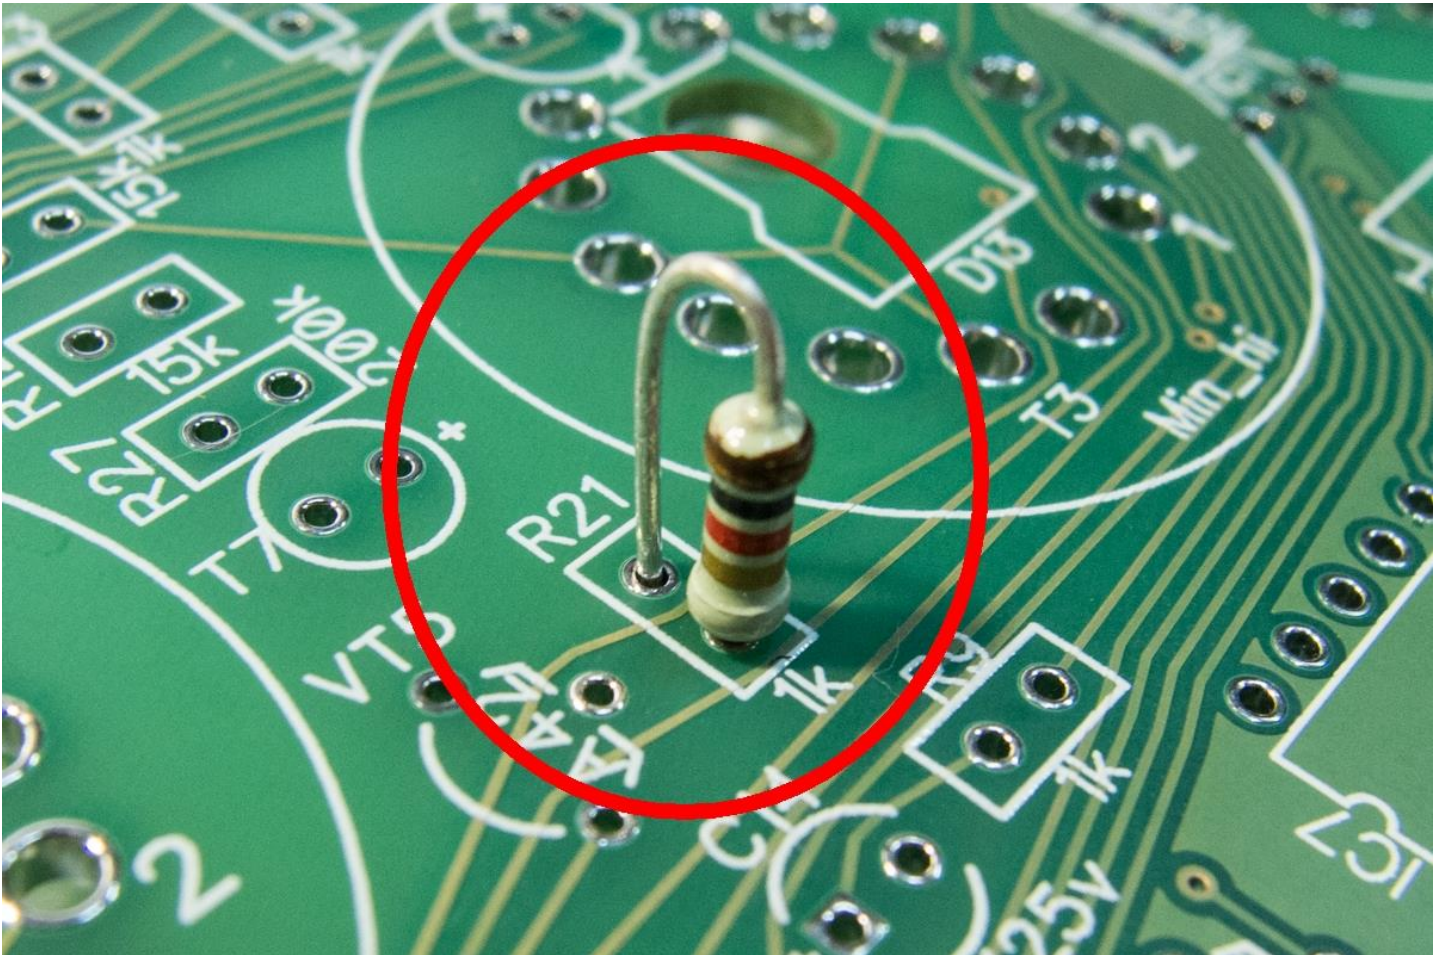

2) Take IN-4 tube with broken glass nipple and put on pins. Then solder the pins:

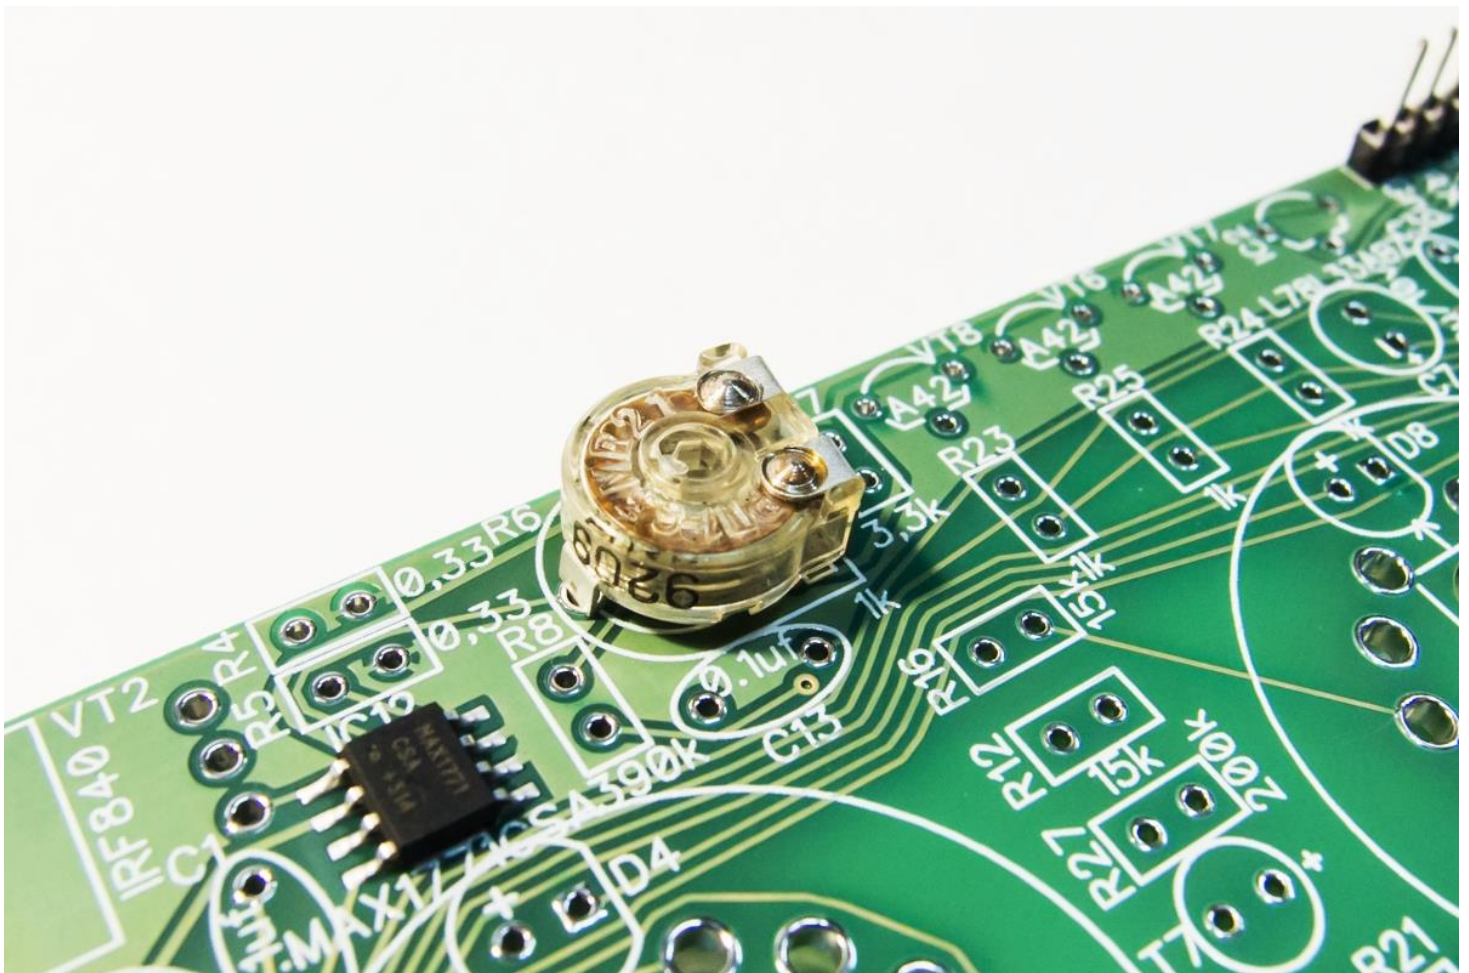

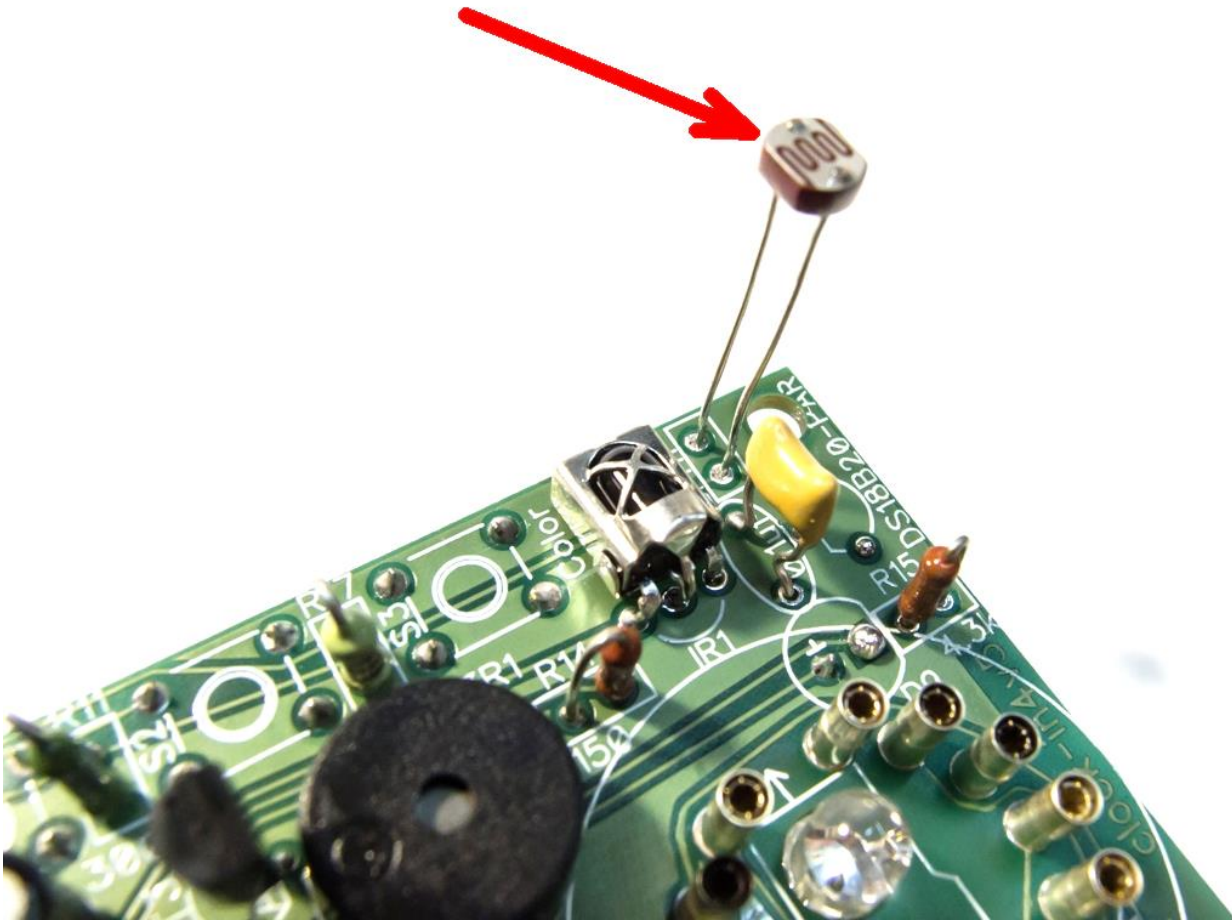

2) Place all resistors verticals.

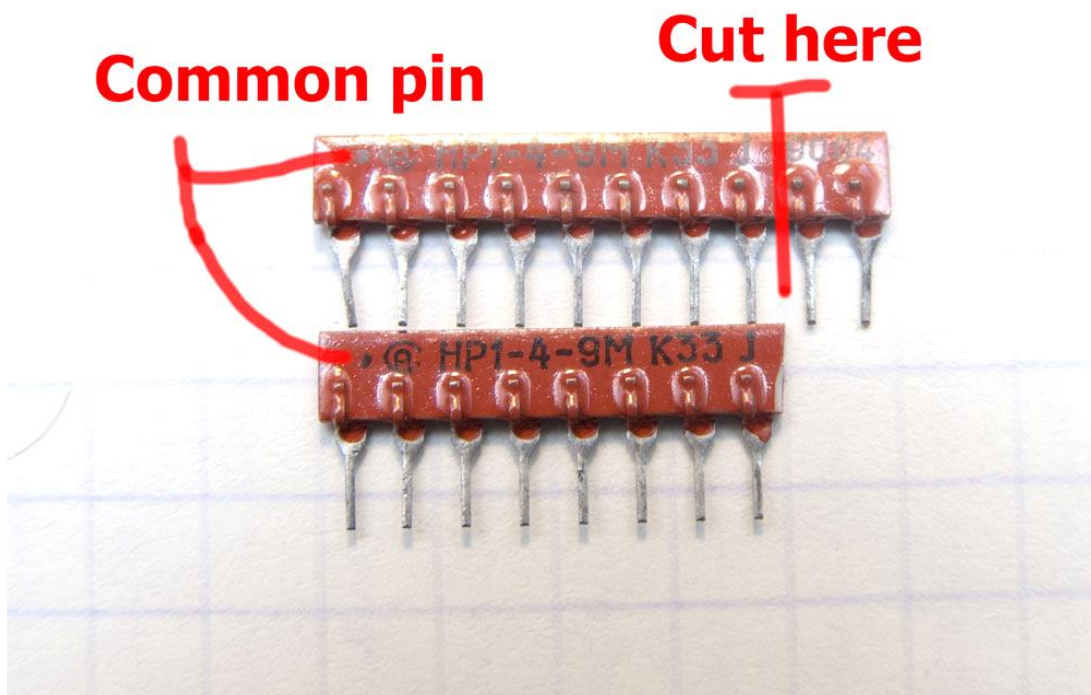

3) Place potentiometer:

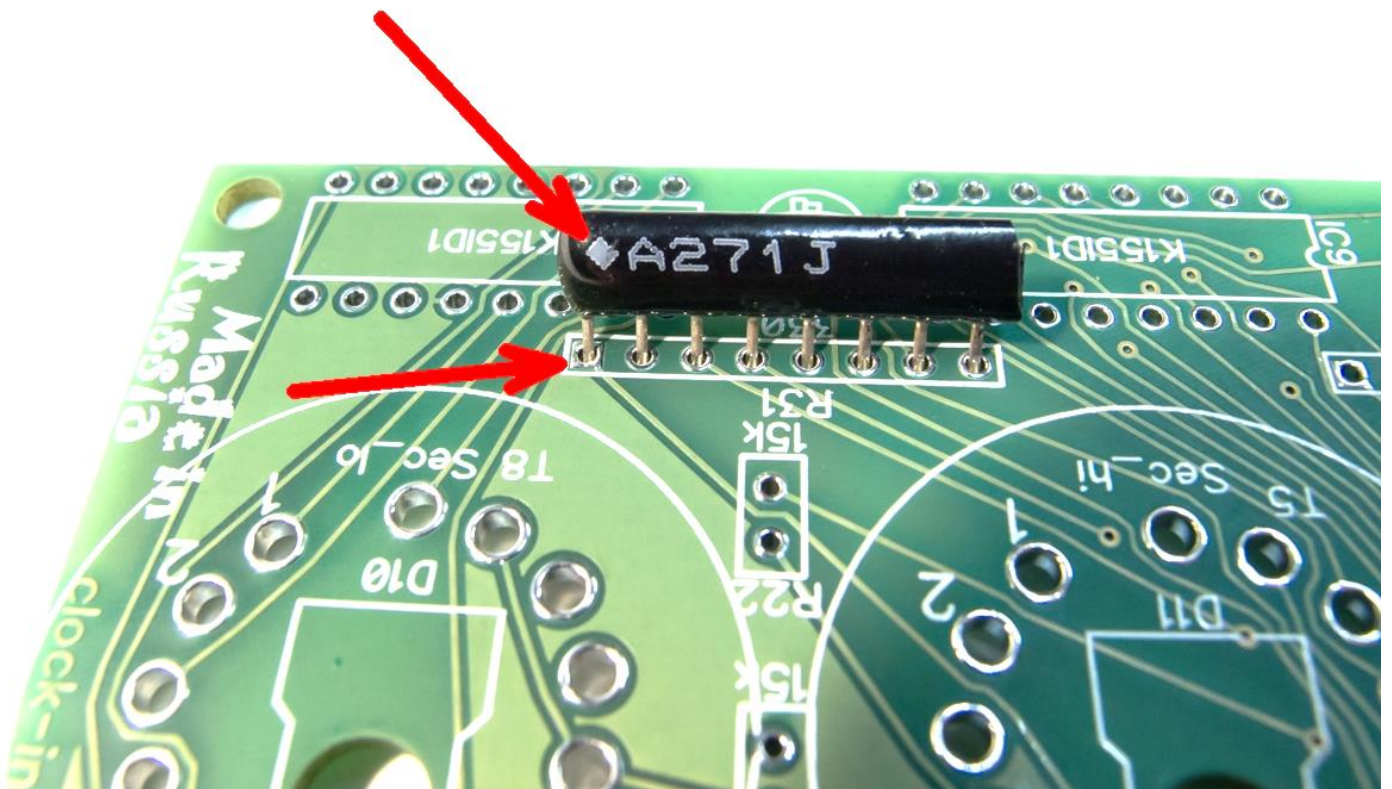

4) Place photoresistor:

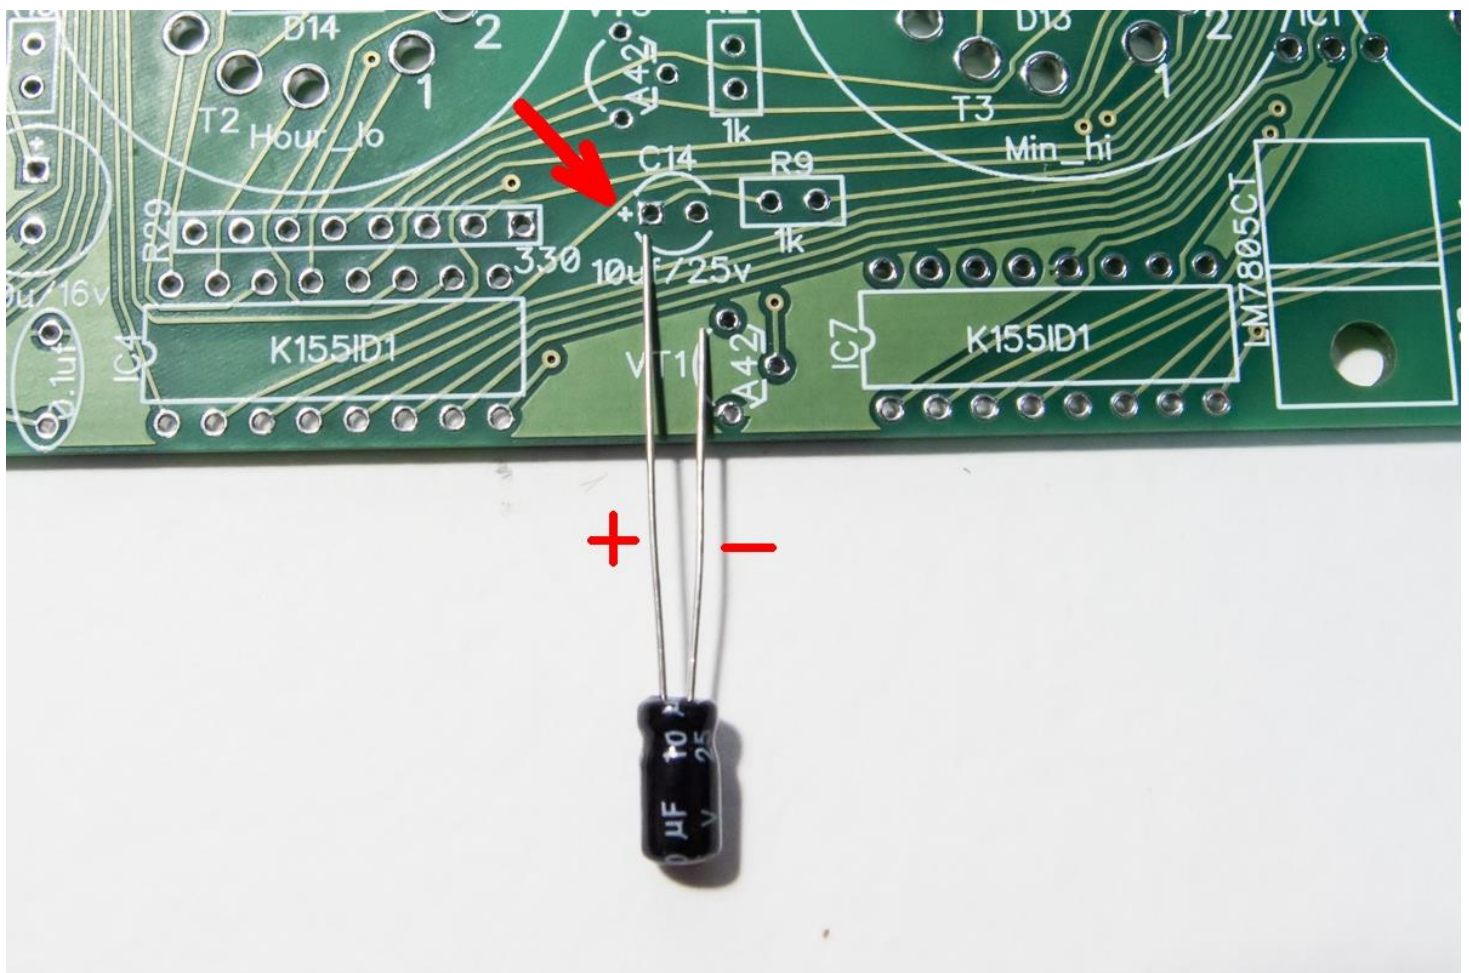

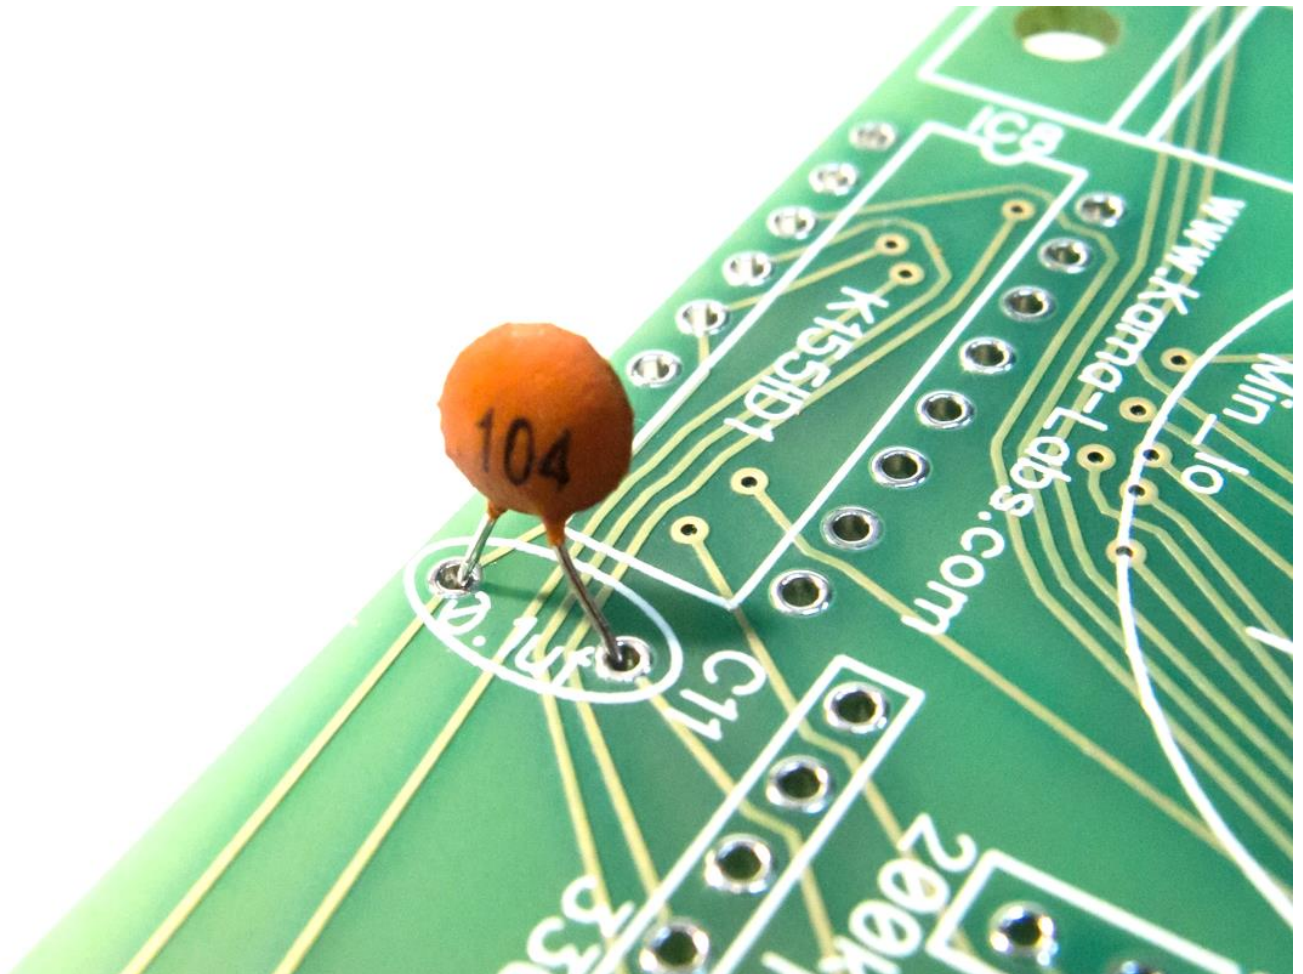

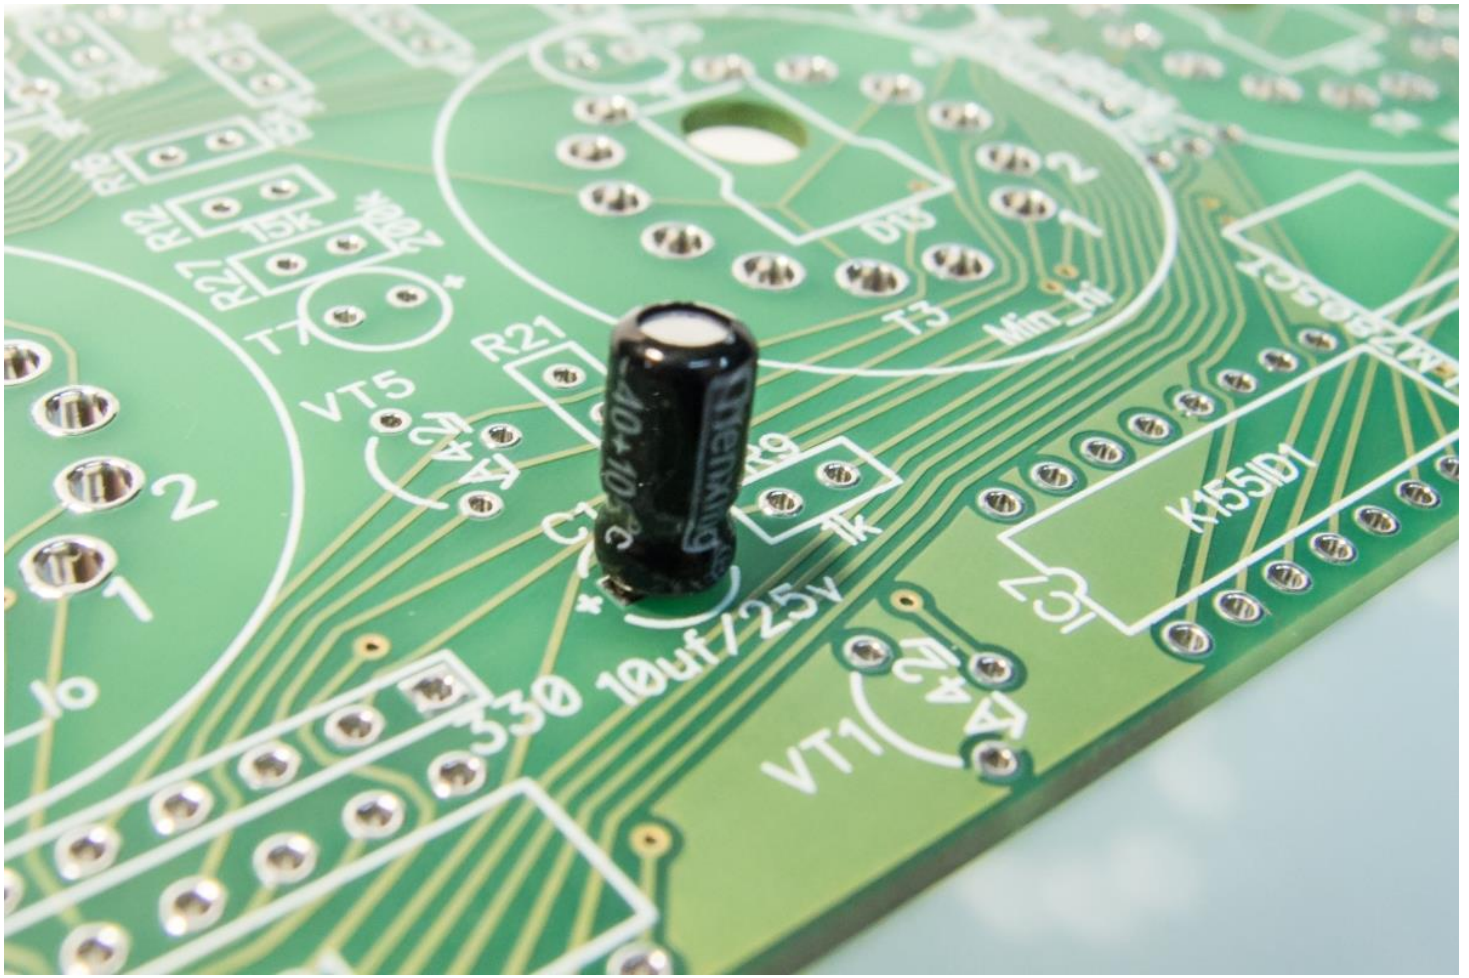

5) Place net.resistors. Common pin (marked with DOT) to SQUARE pad:

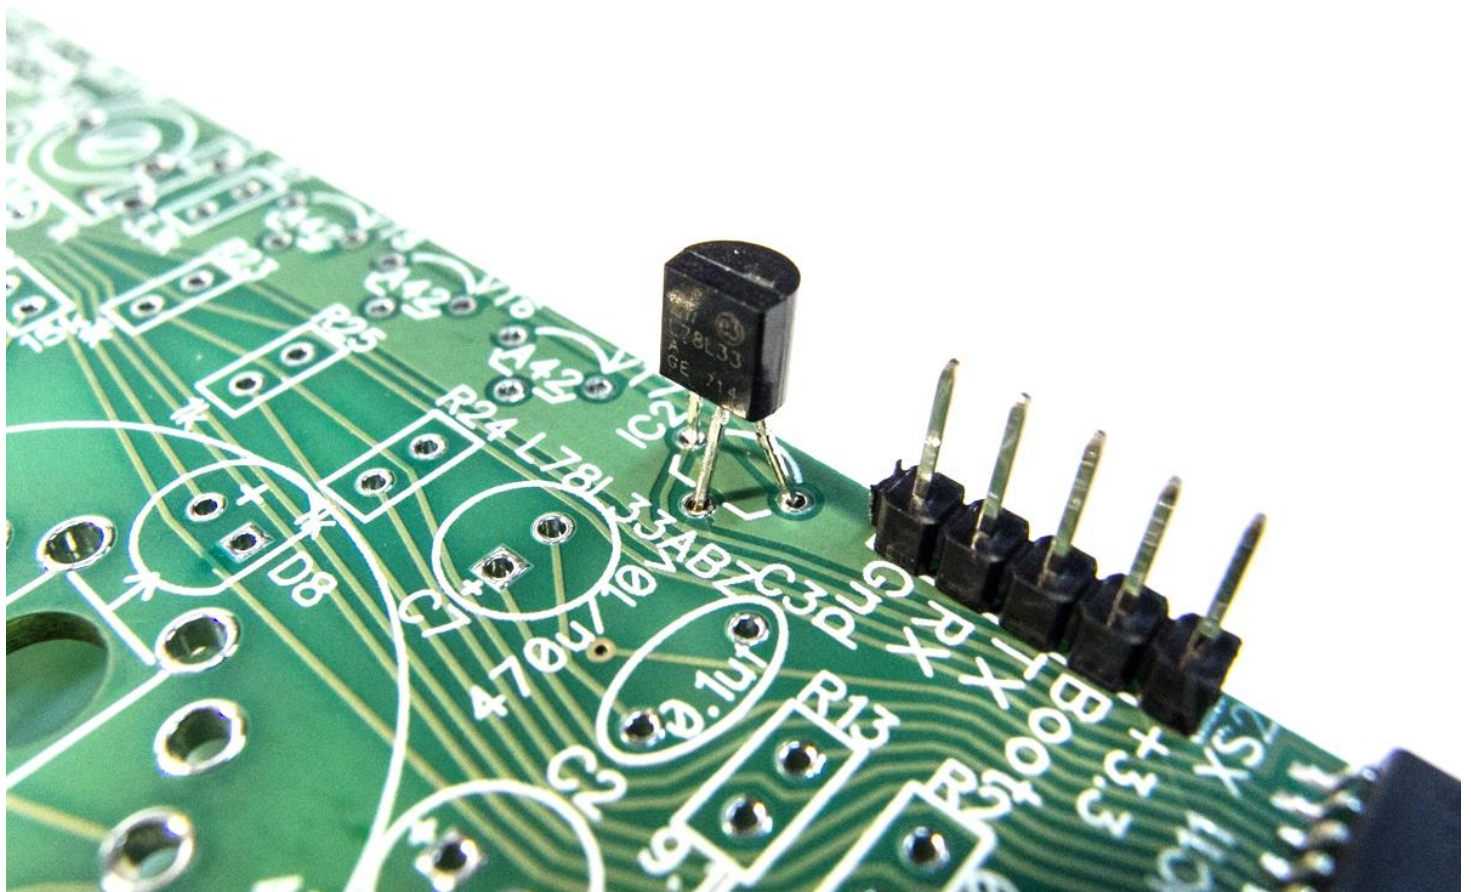

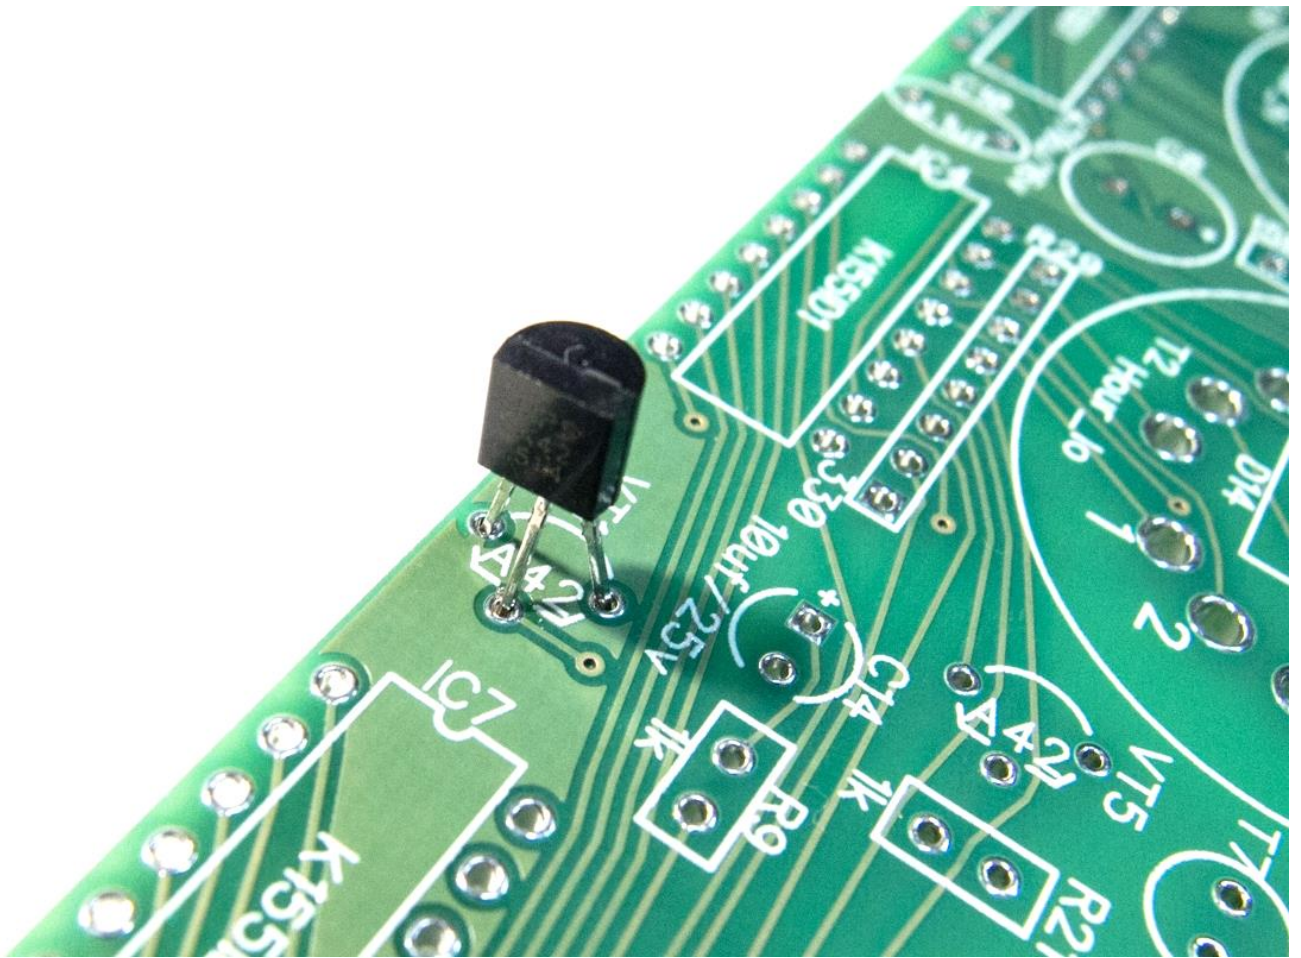

6) Place all capacitors. Be careful with polarity!

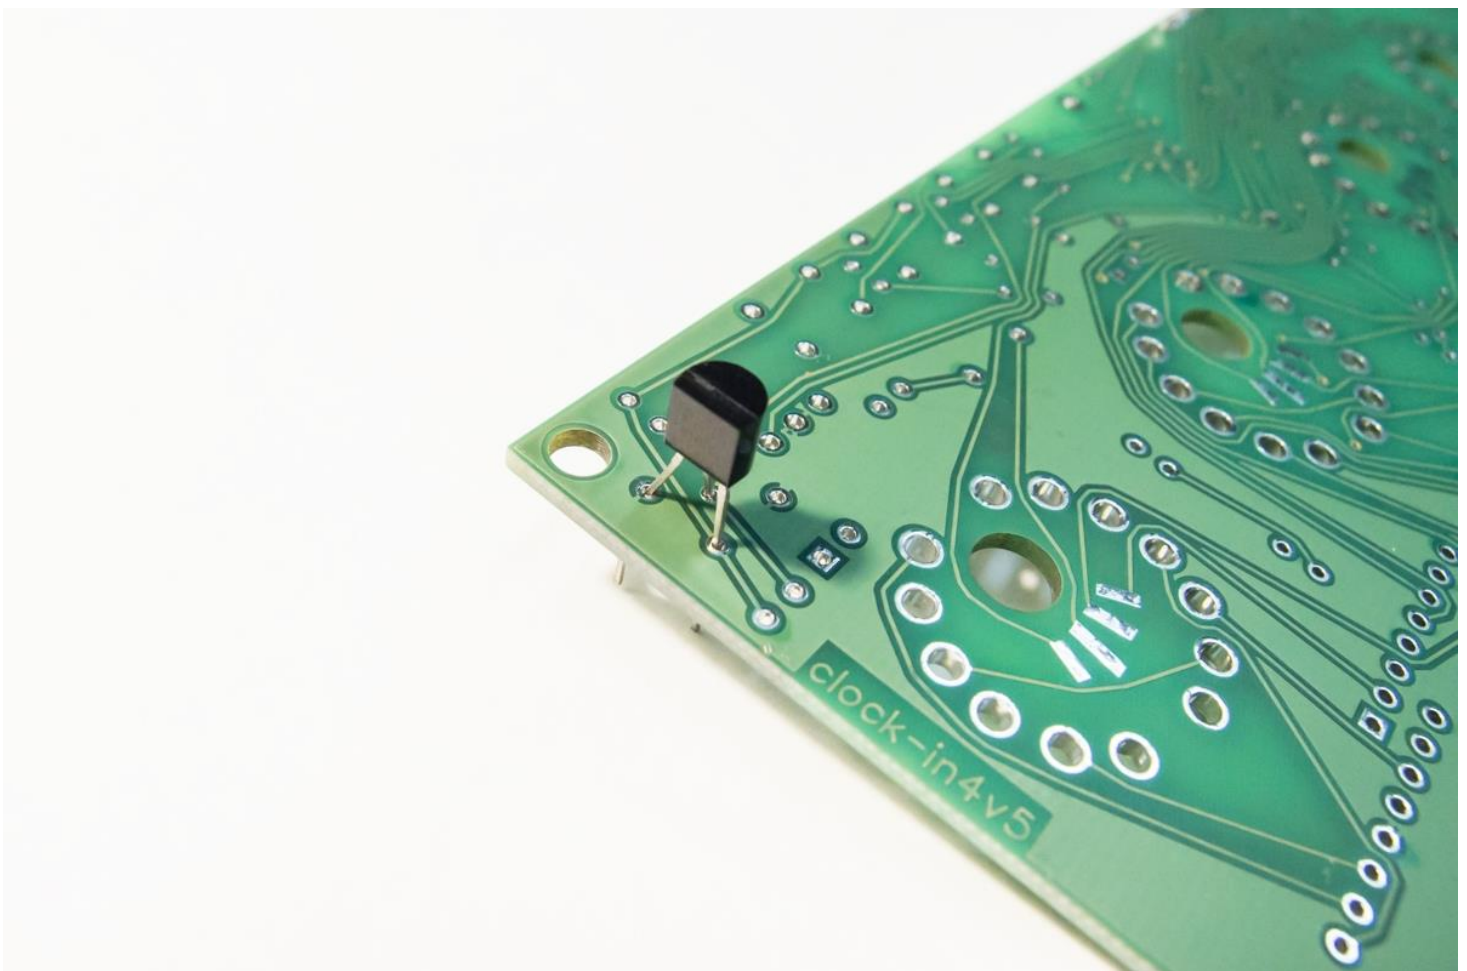

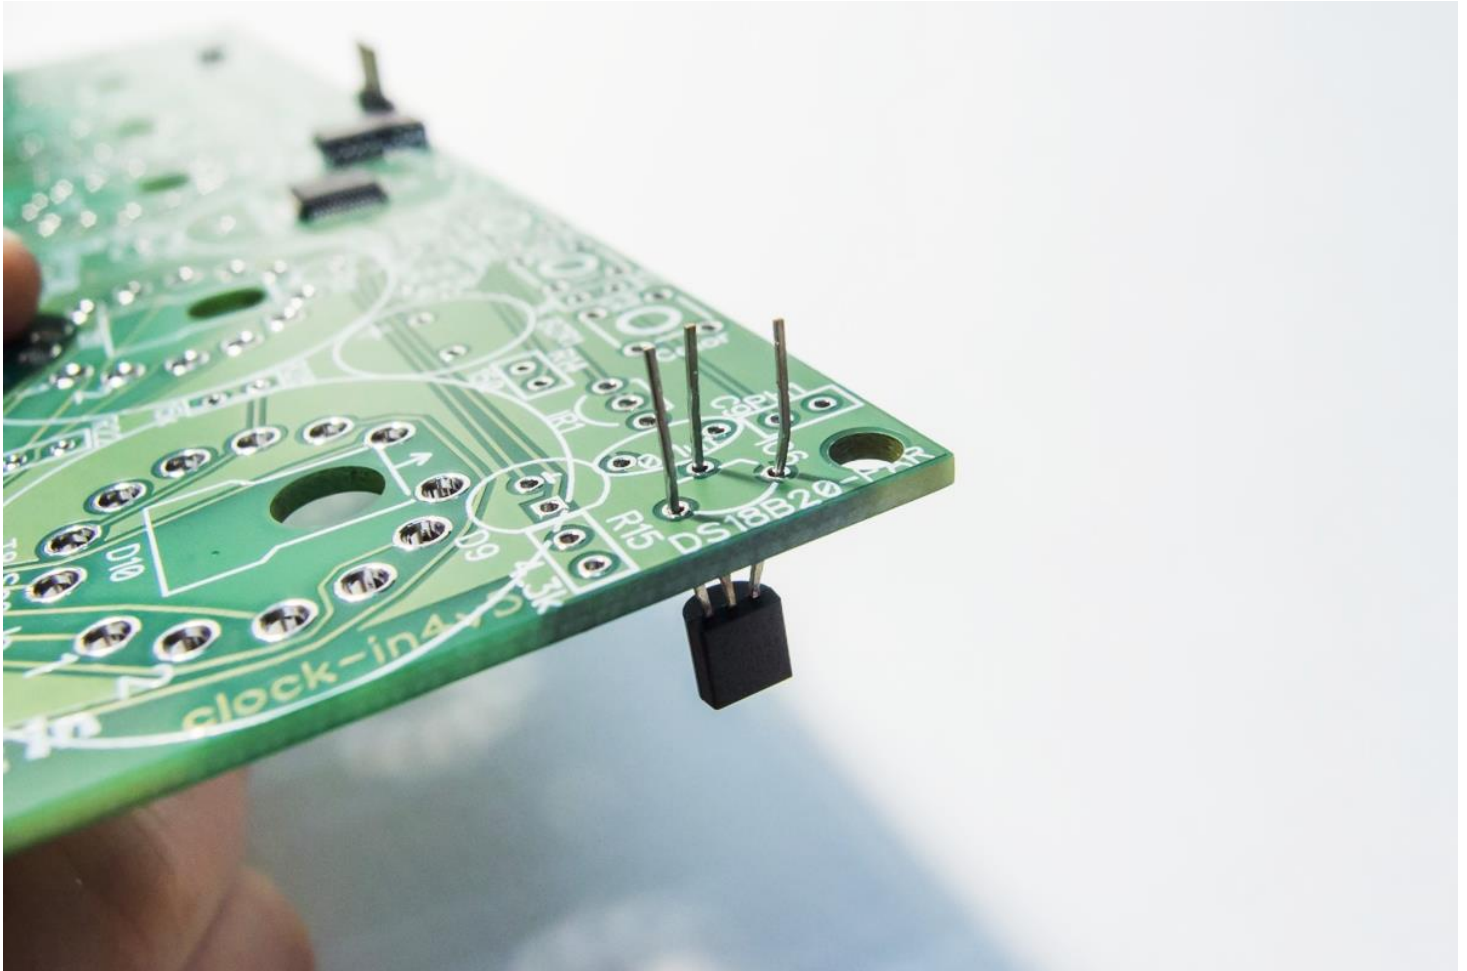

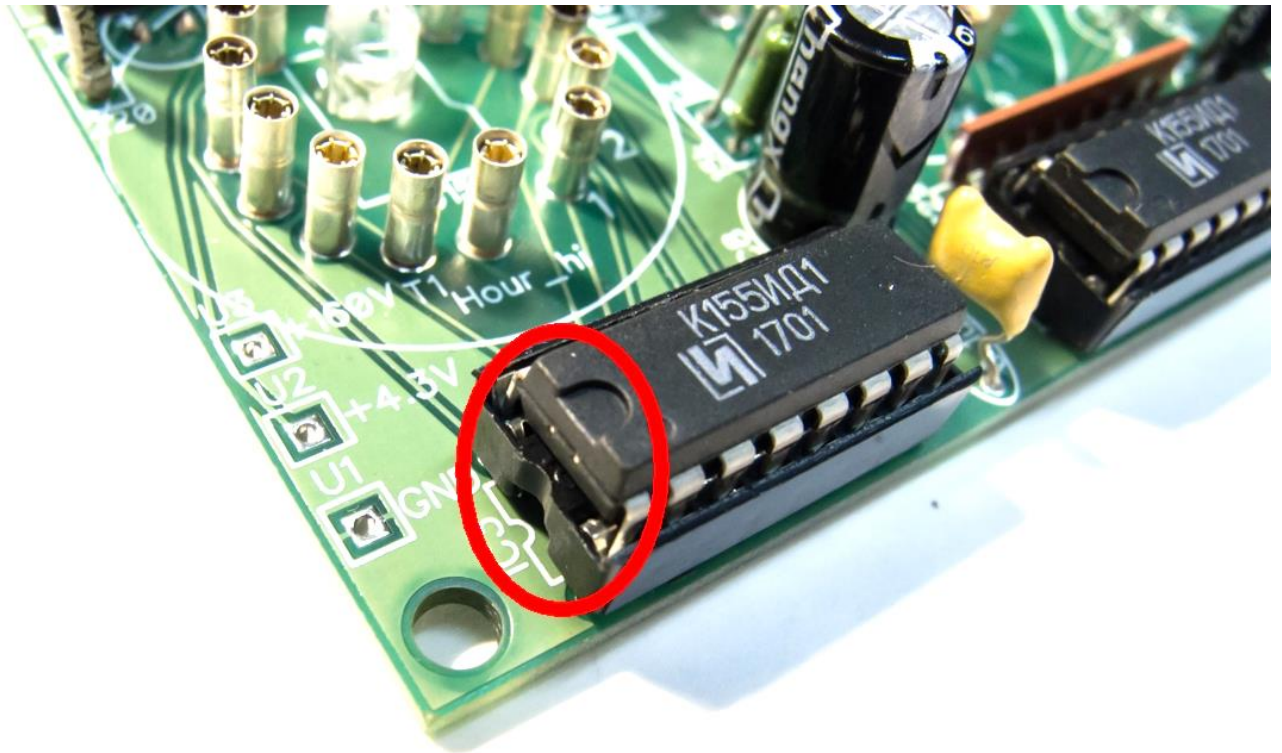

7) Place all transistors, voltage stabilizer(L78L33,LM7805) and temperature sensor(DS18B20):

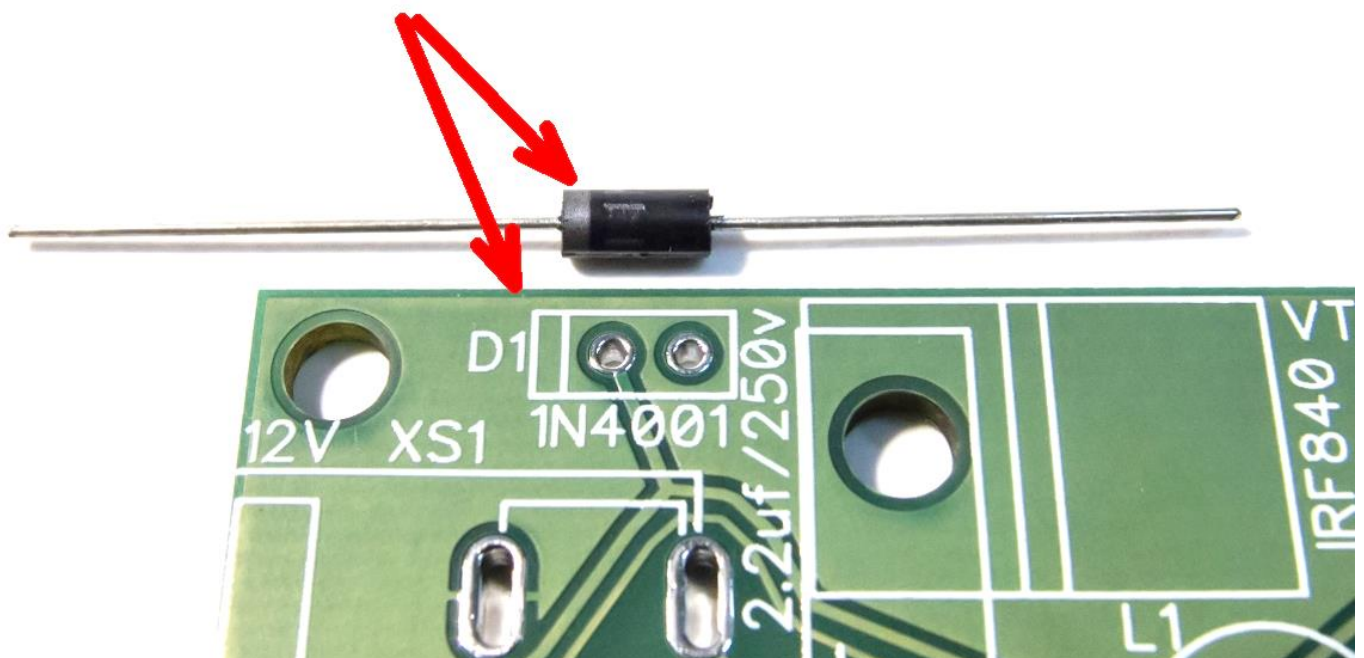

Temperature sensor(DS18B20) should be install on back side of PCB:

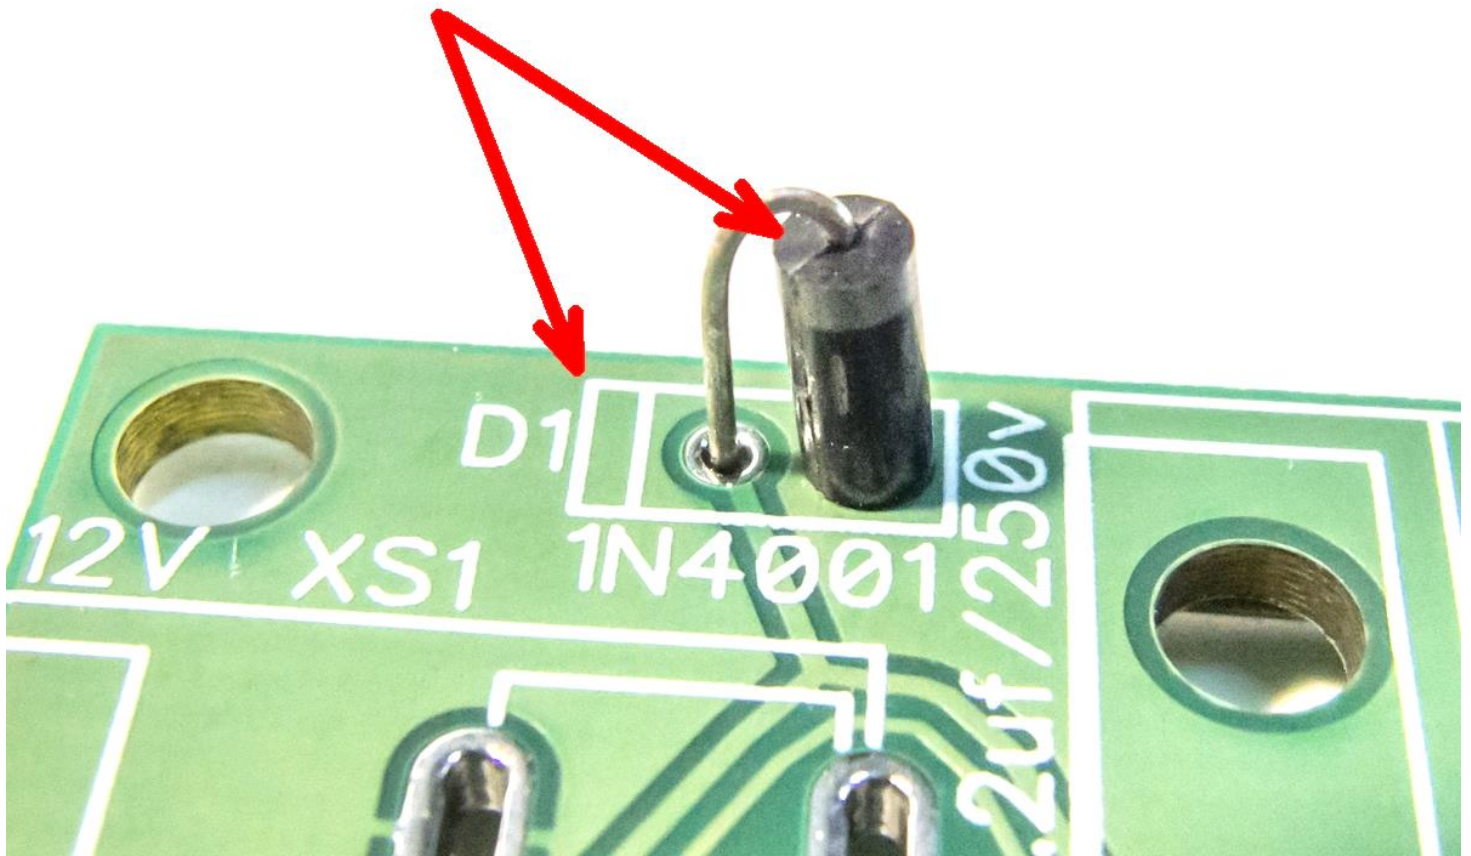

8) Place sockets for ICs:

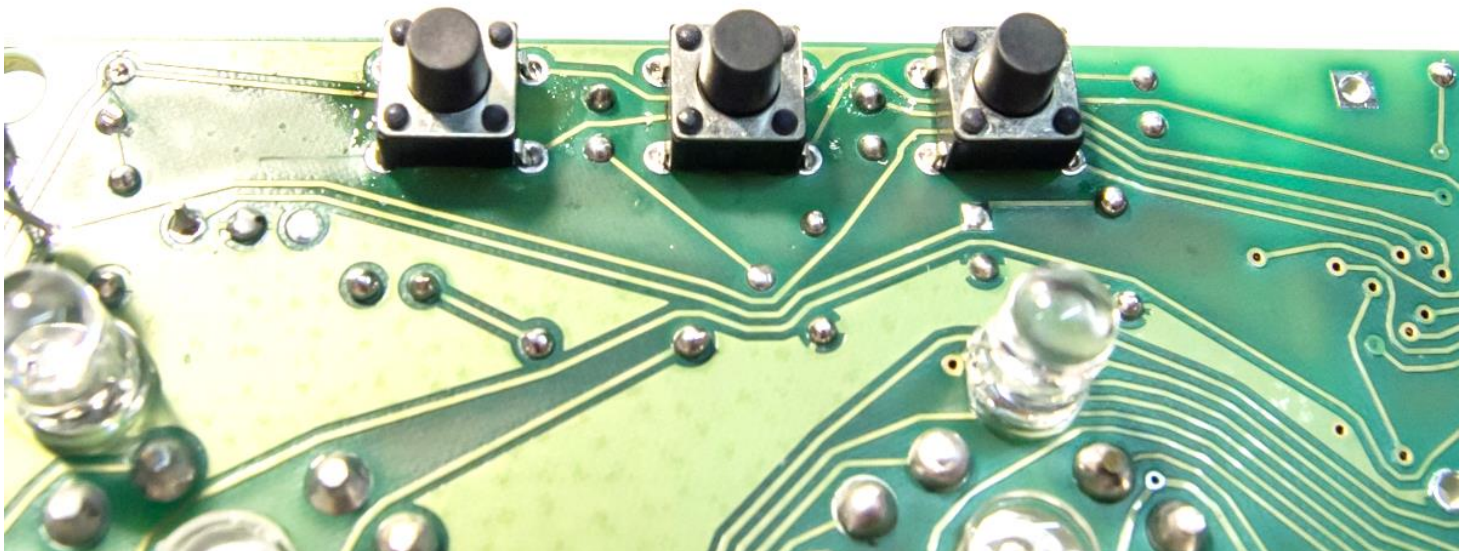

9) Place diodes and be careful with polarity:

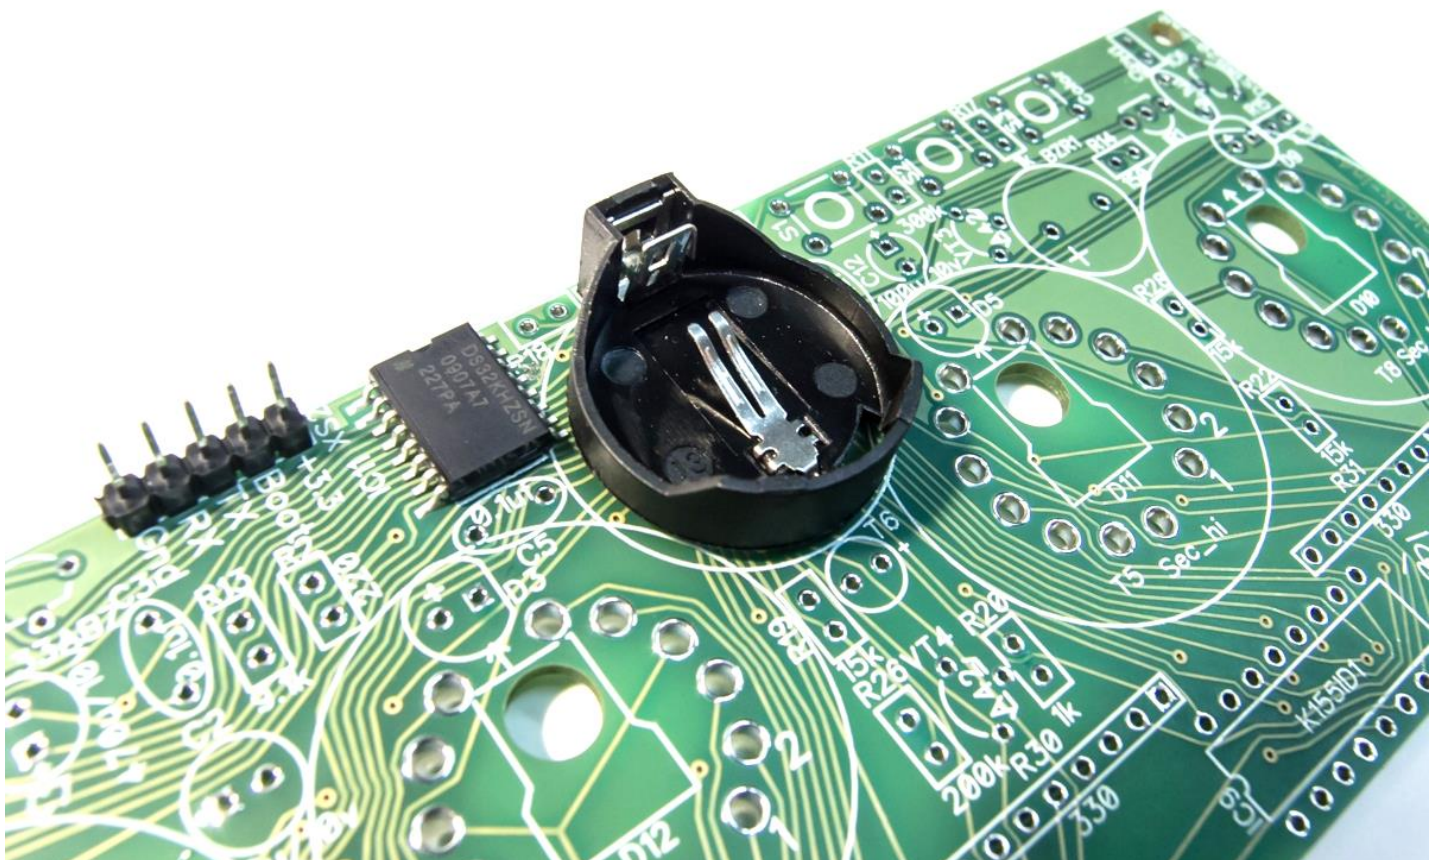

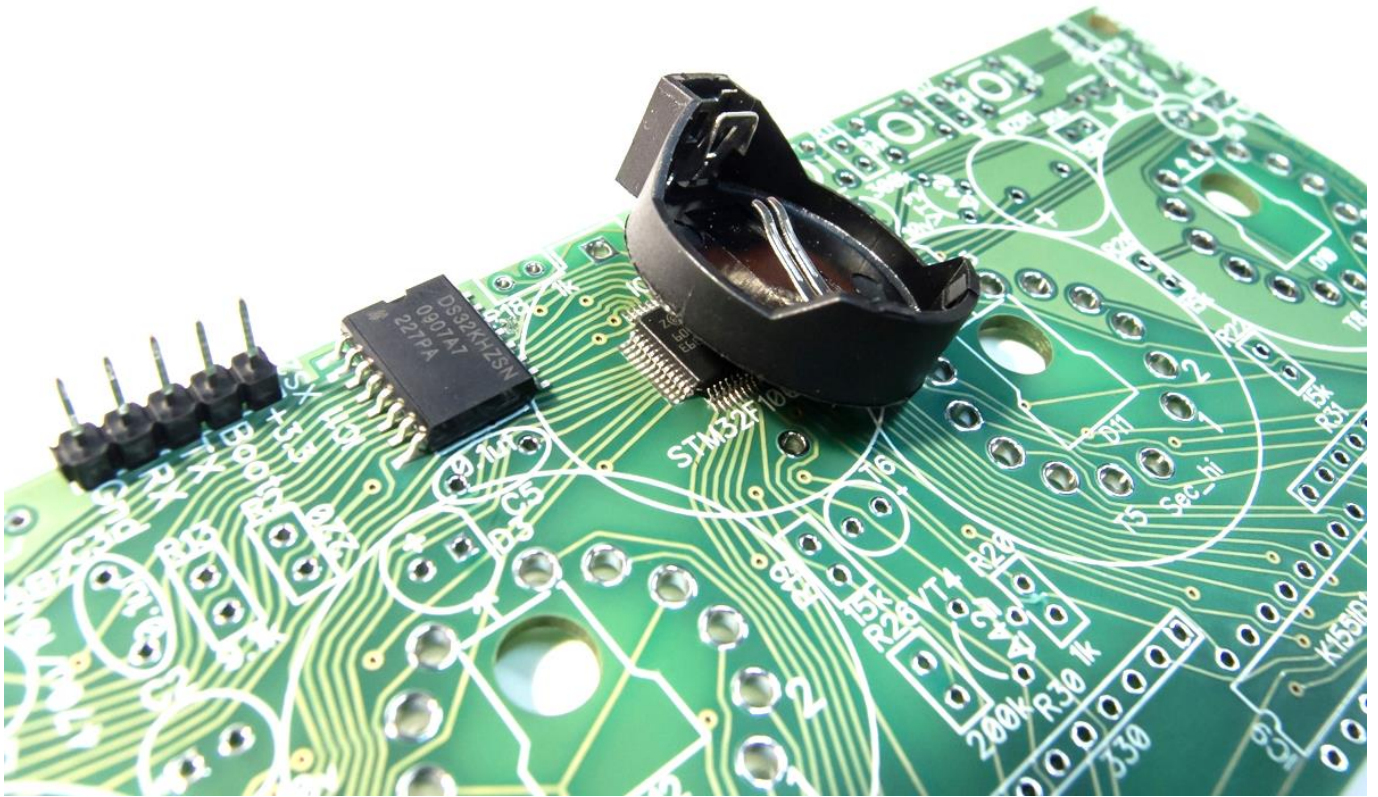

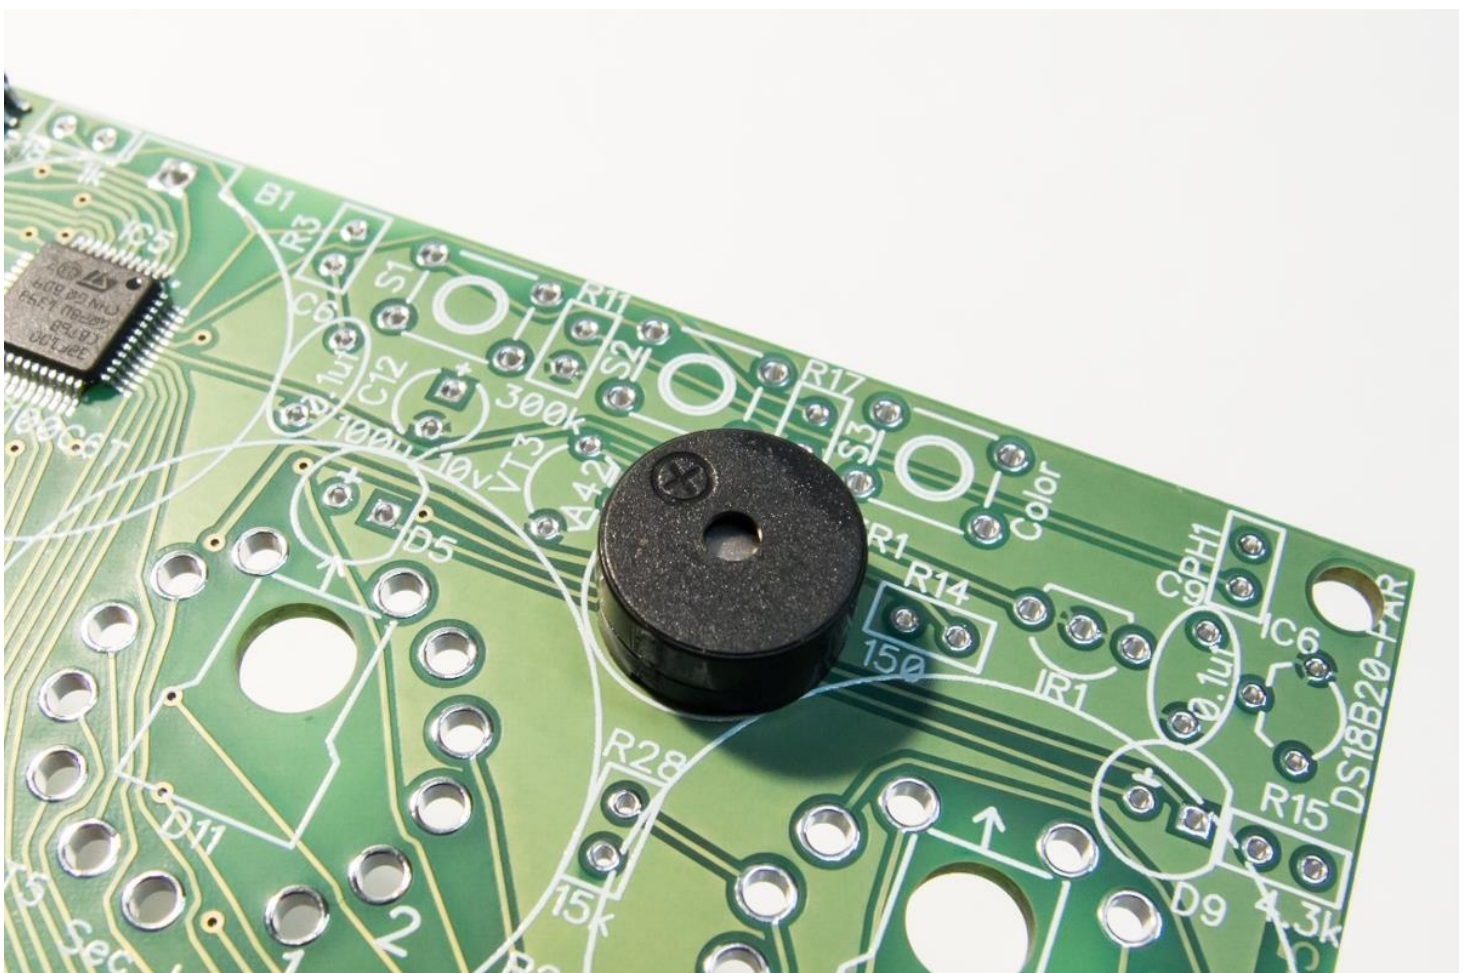

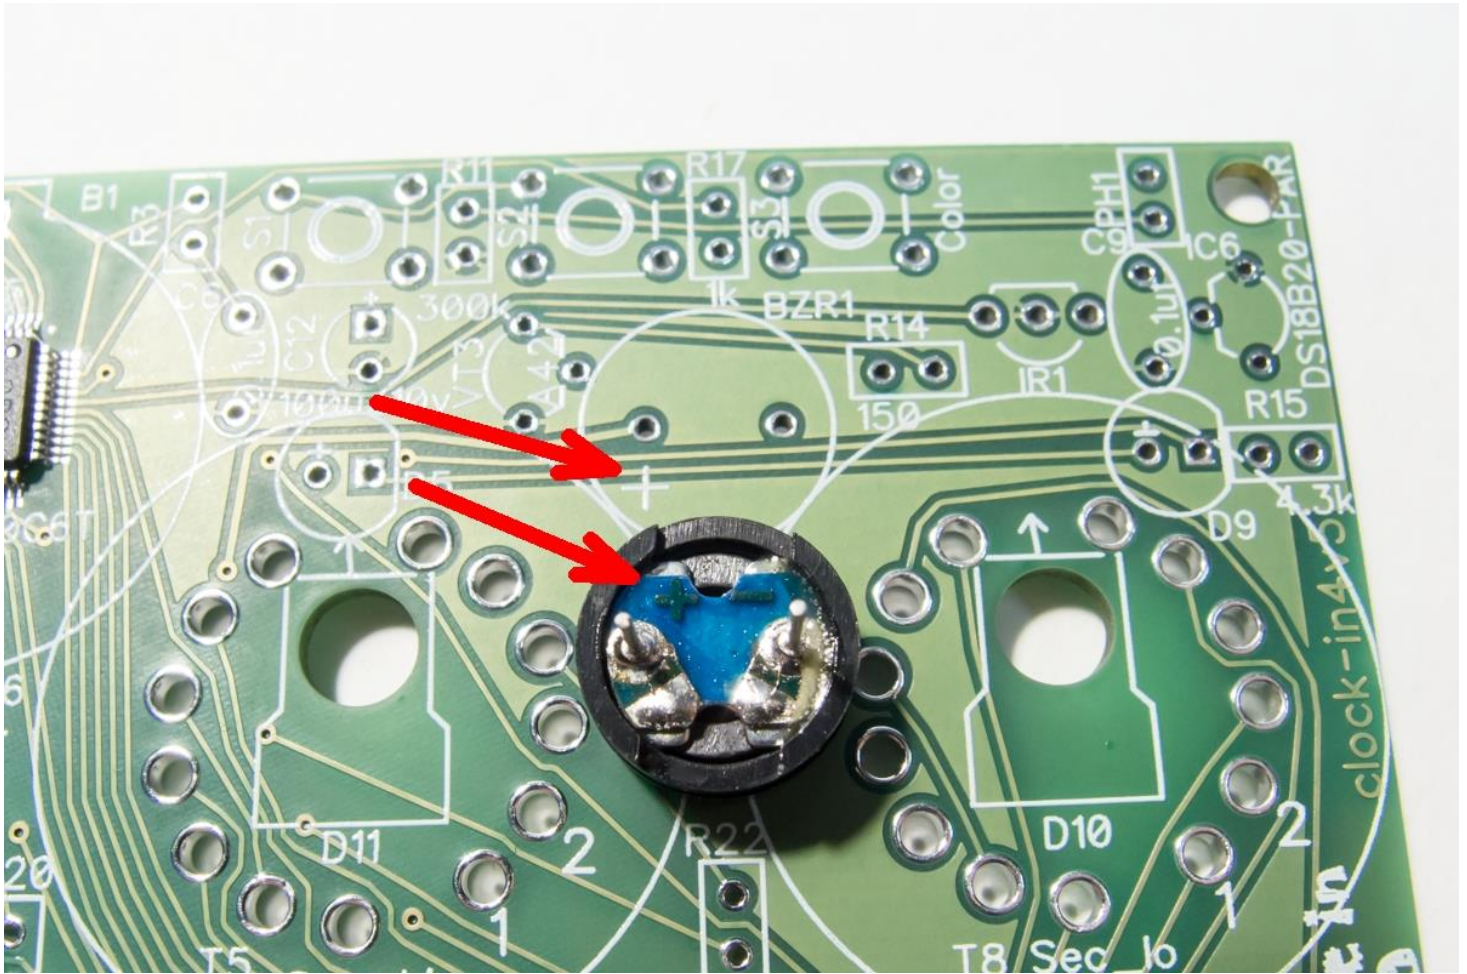

10) Place 3 buttons on back side:

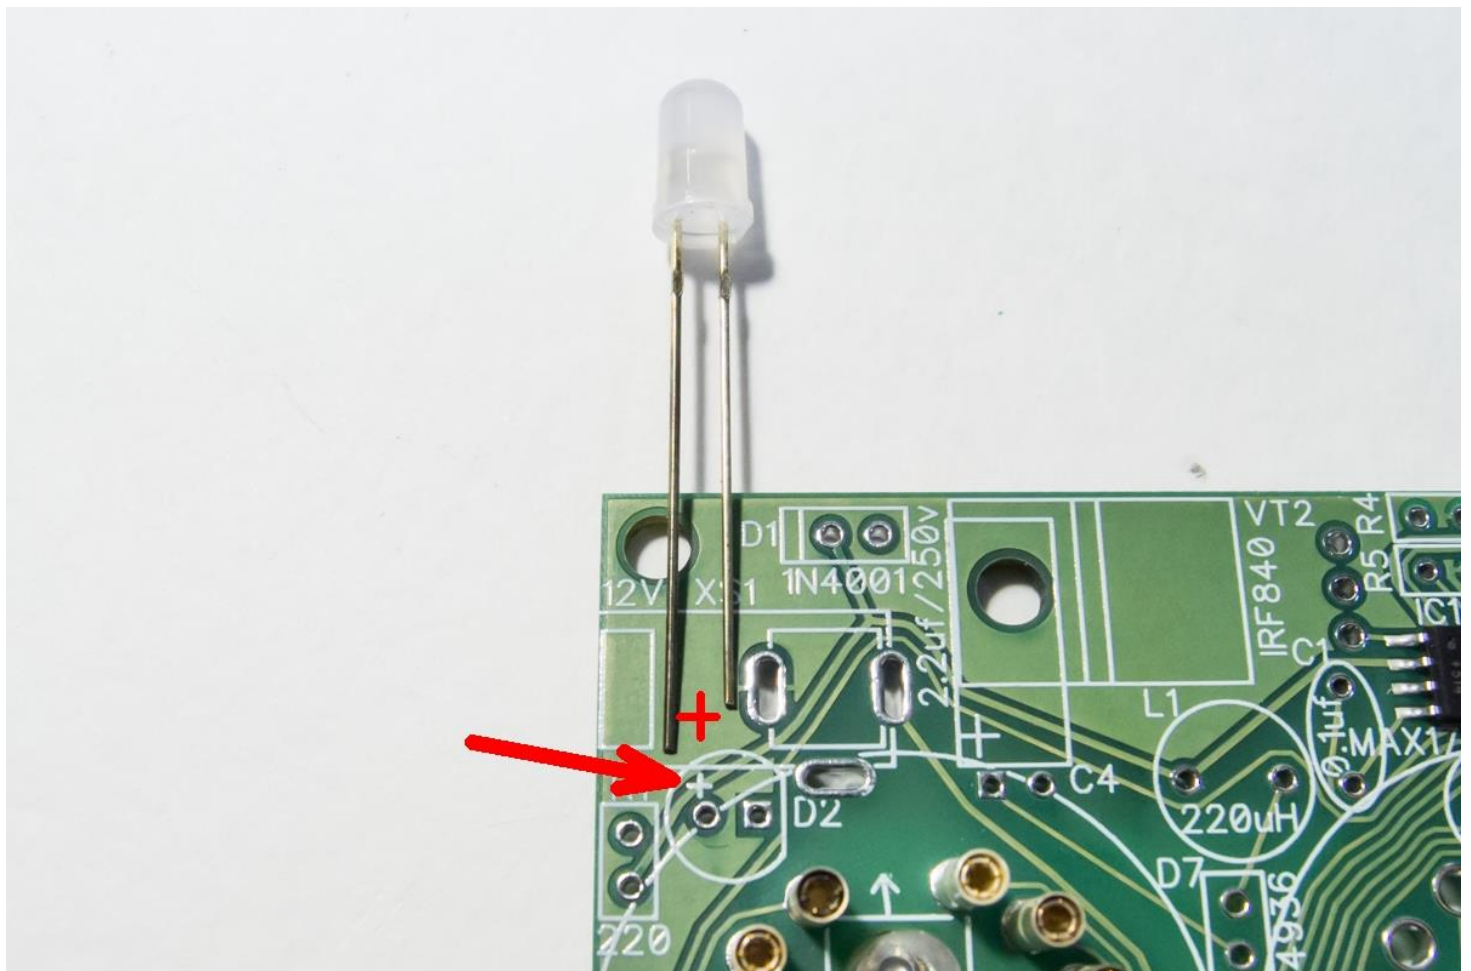

11) Place battery holder and insert battery when cock will assembled completely:

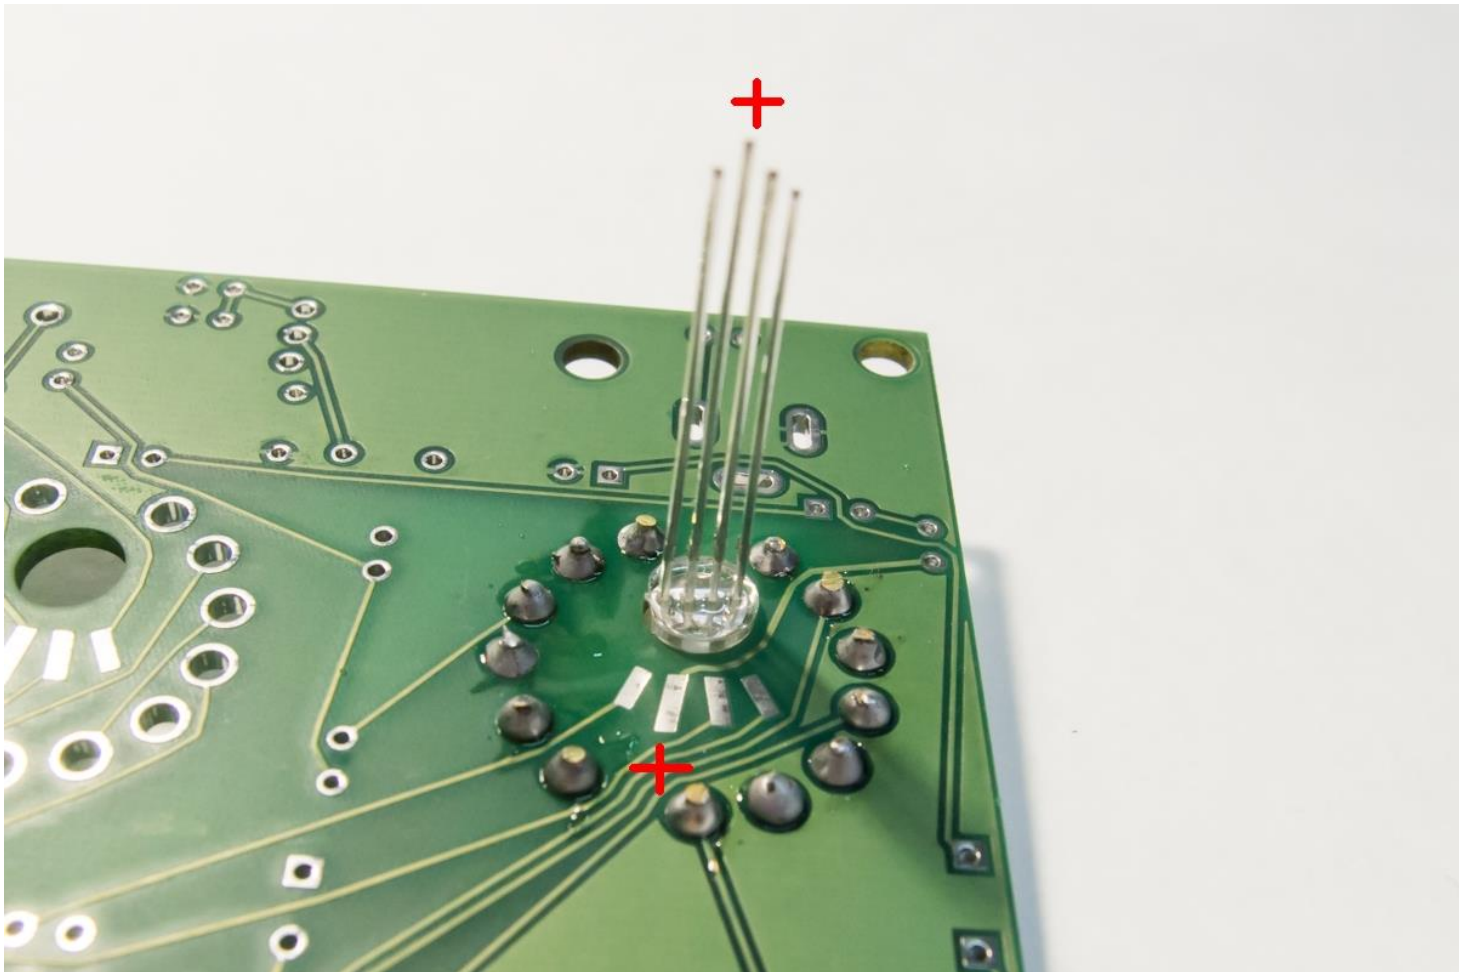

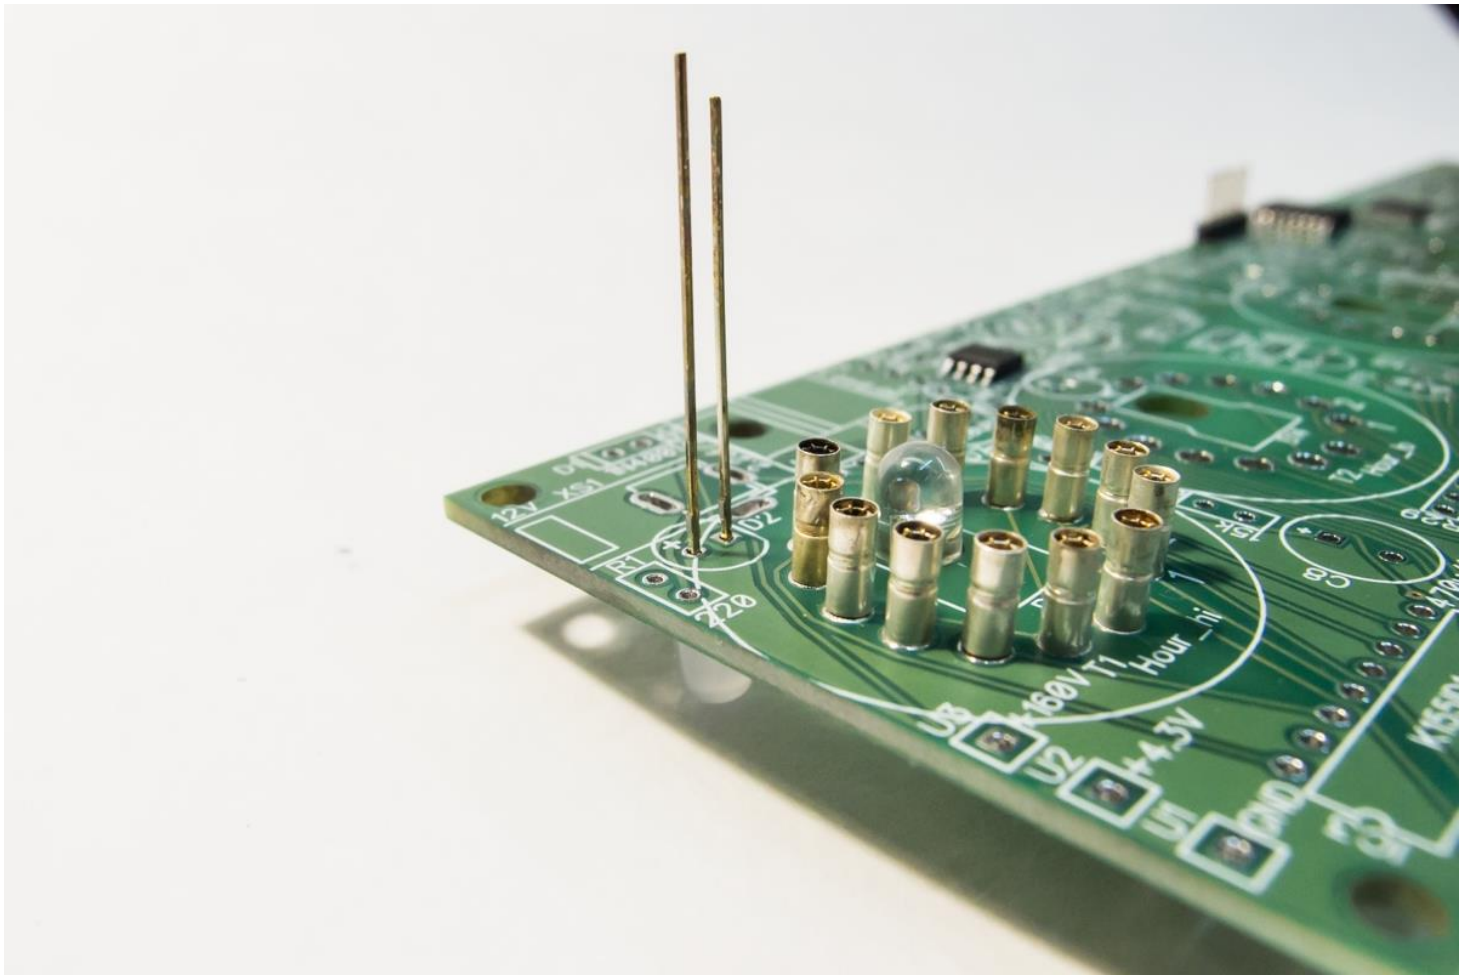

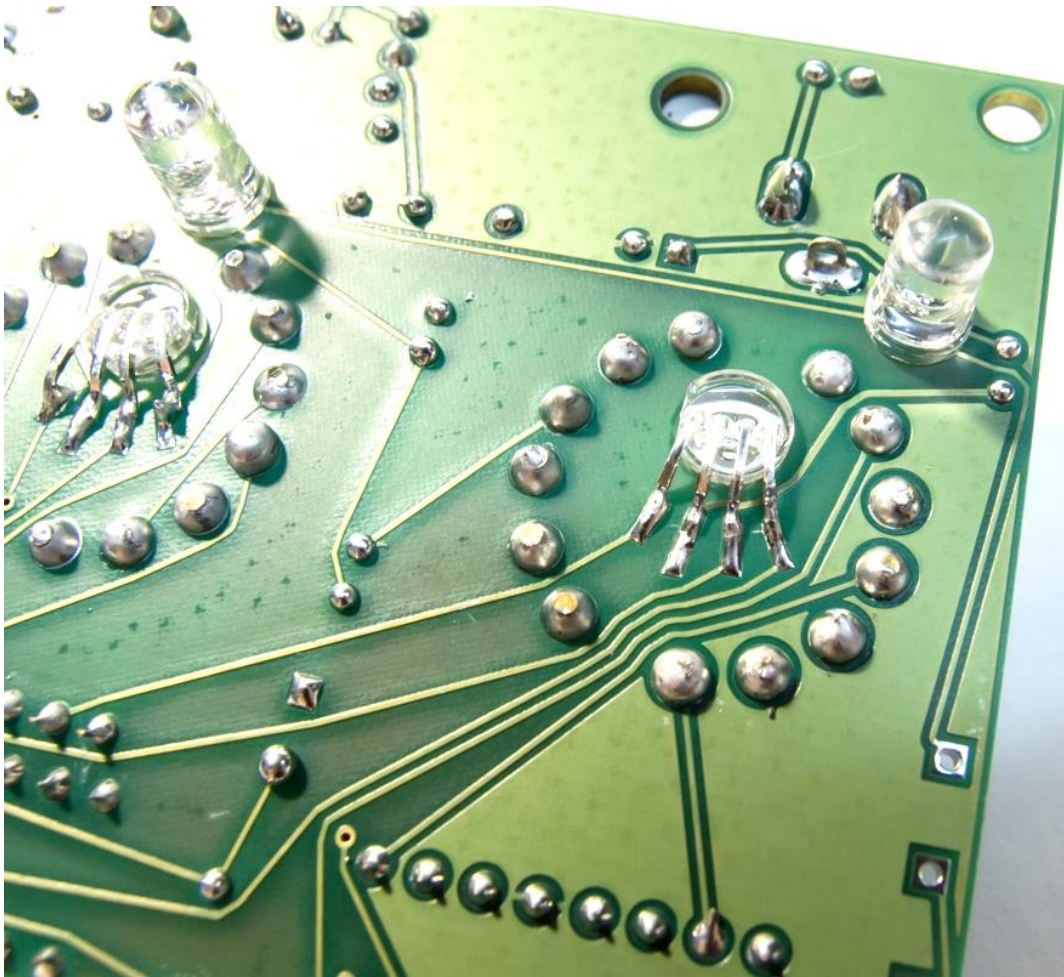

12) Place buzzer and be careful with polarity:

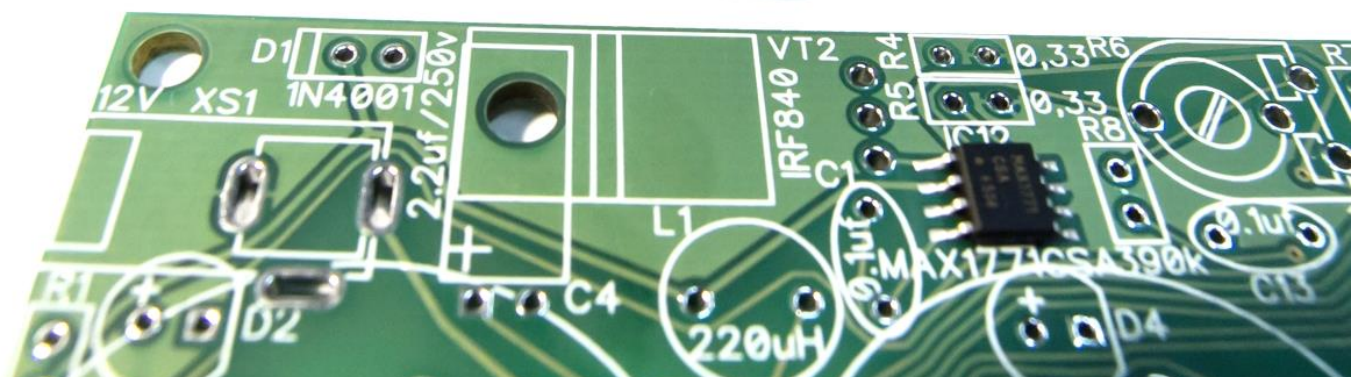

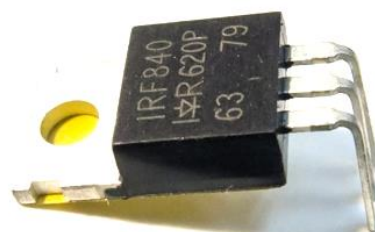

13) Insert 6 LEDs:

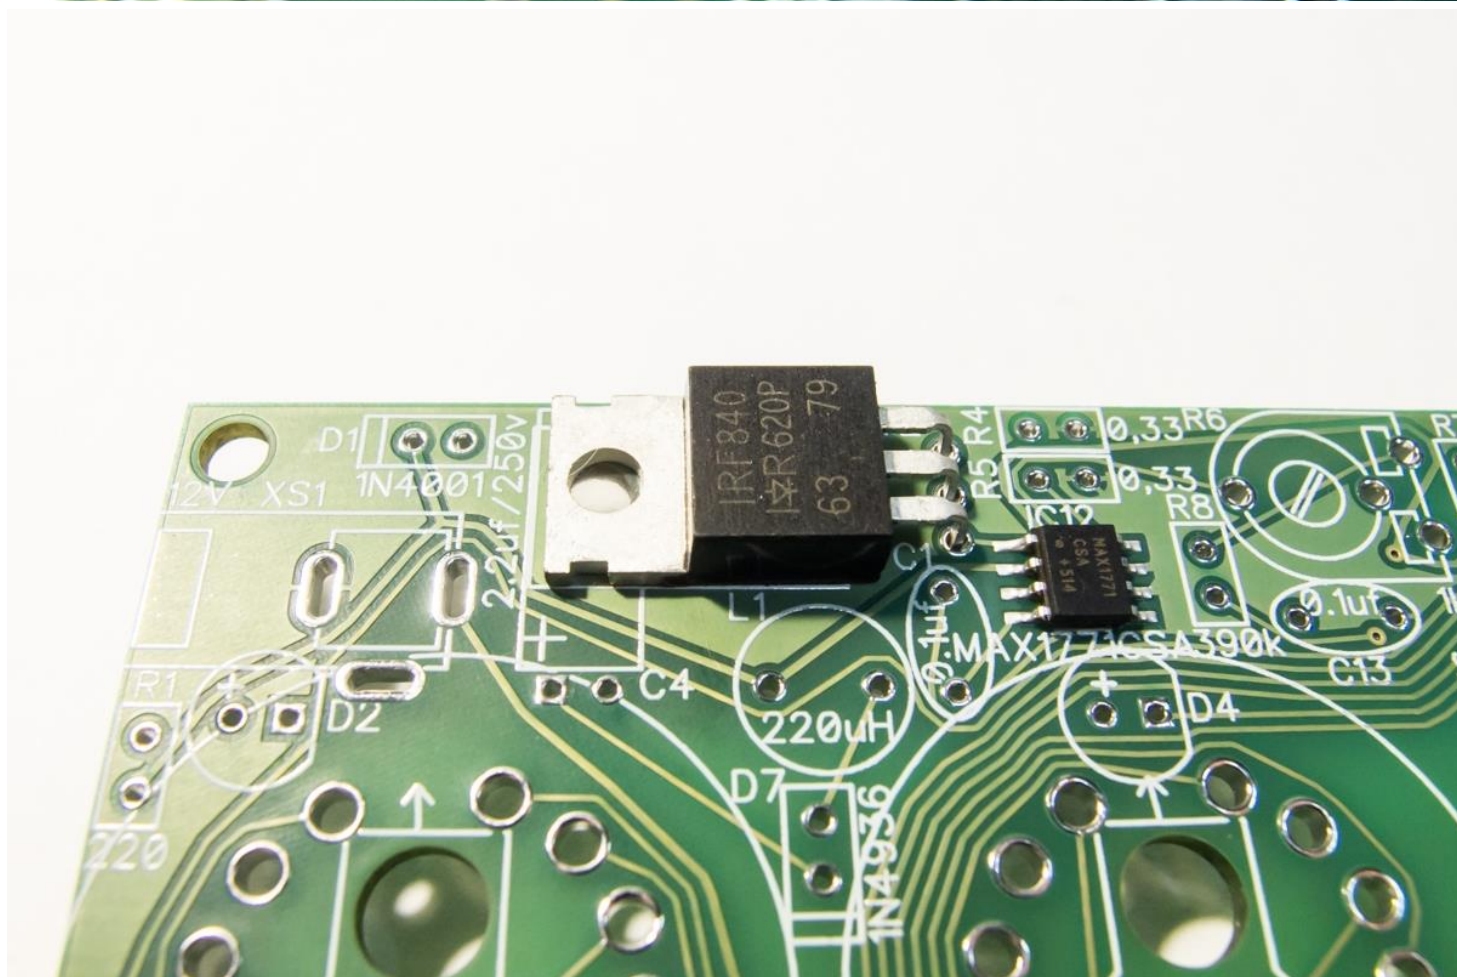

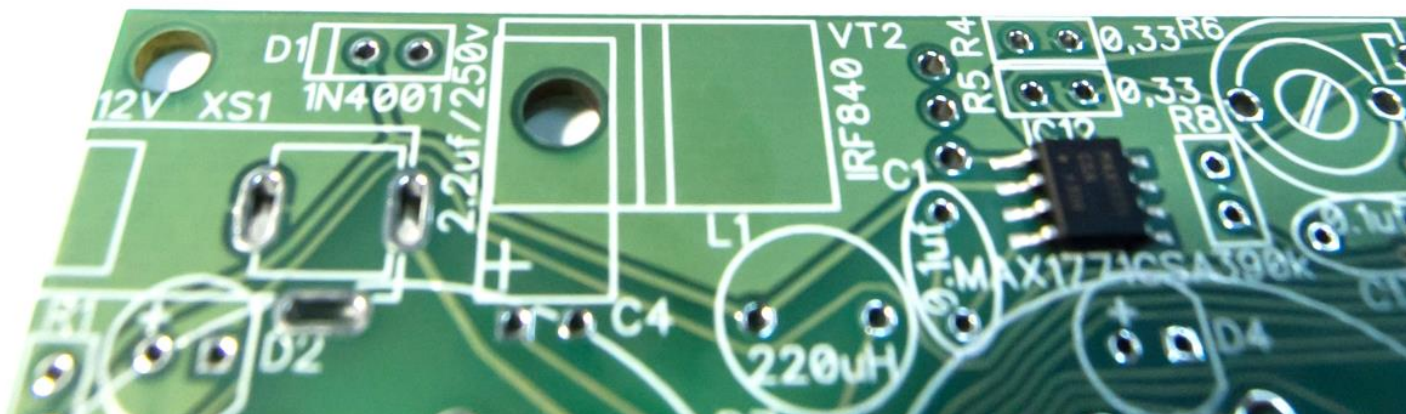

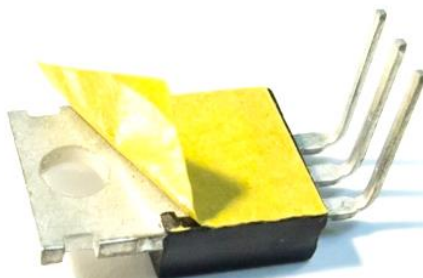

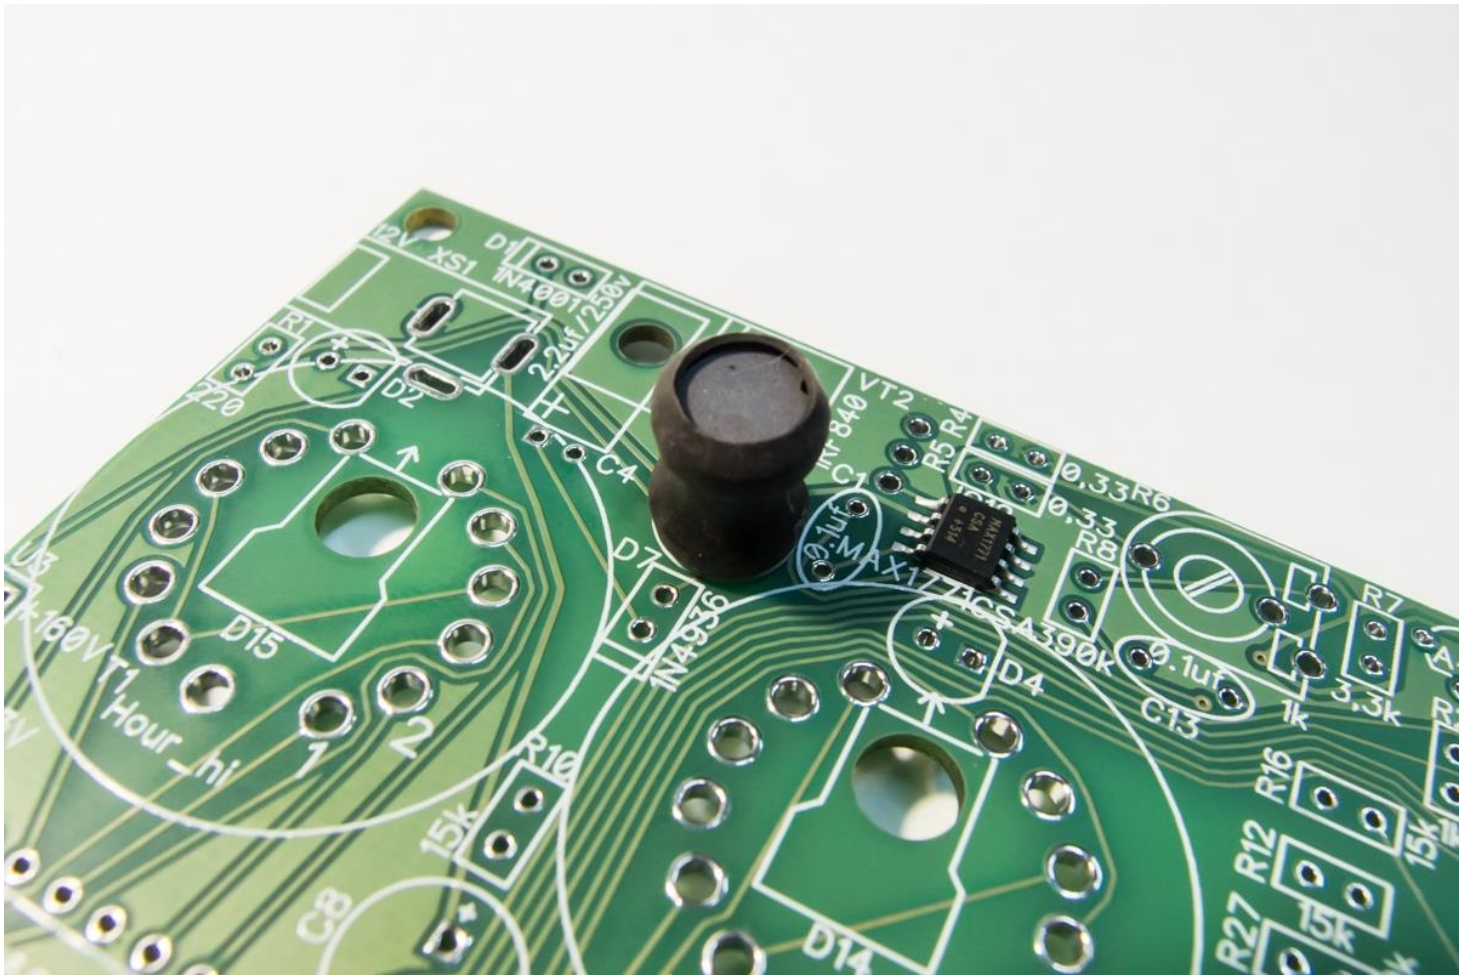

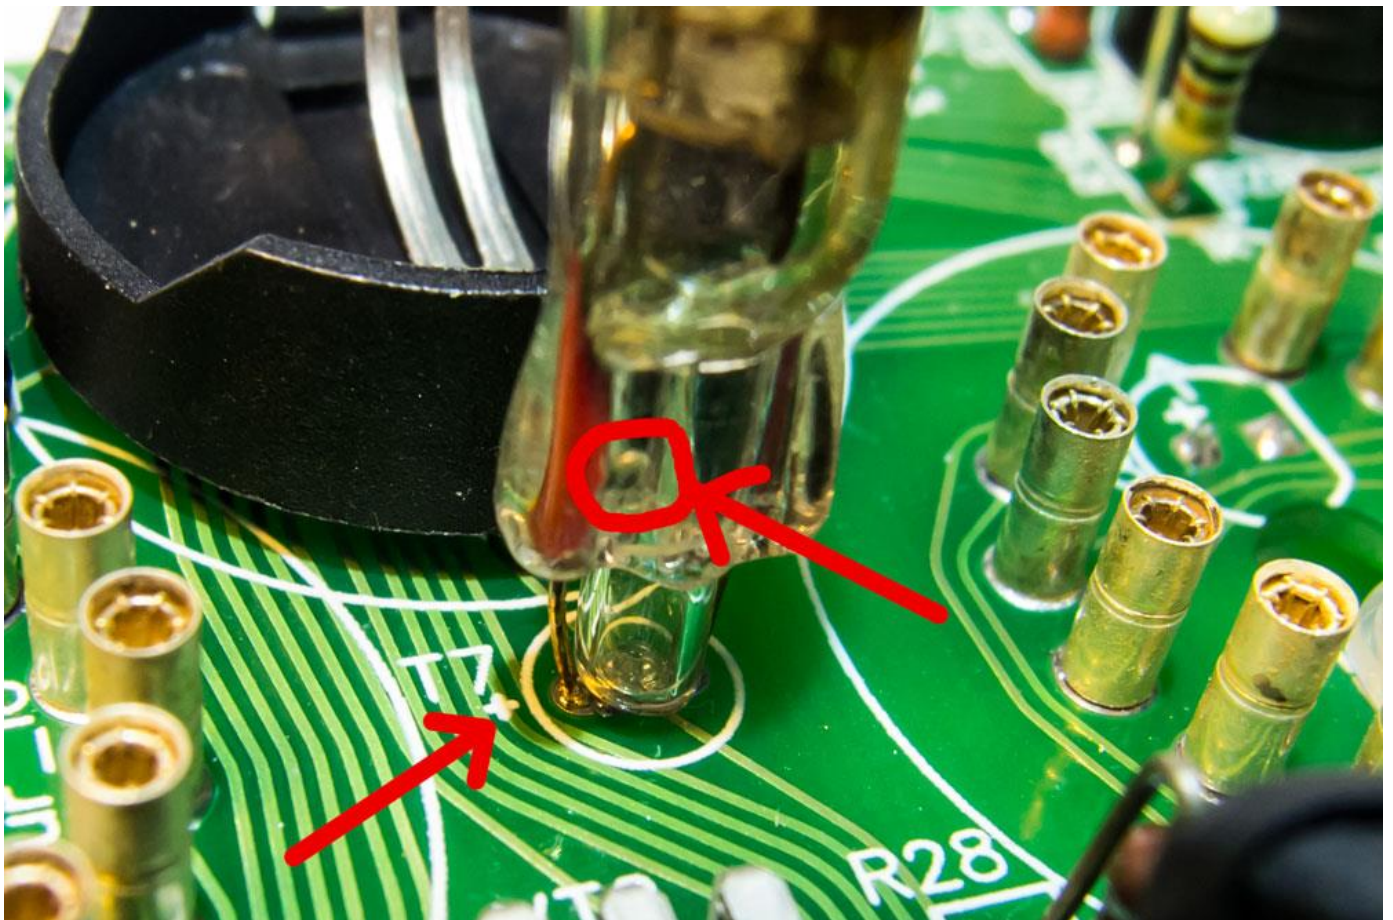

14) Place big transistor and L1 inductor. Use double side adhesive tape for fix transistor to PCB:

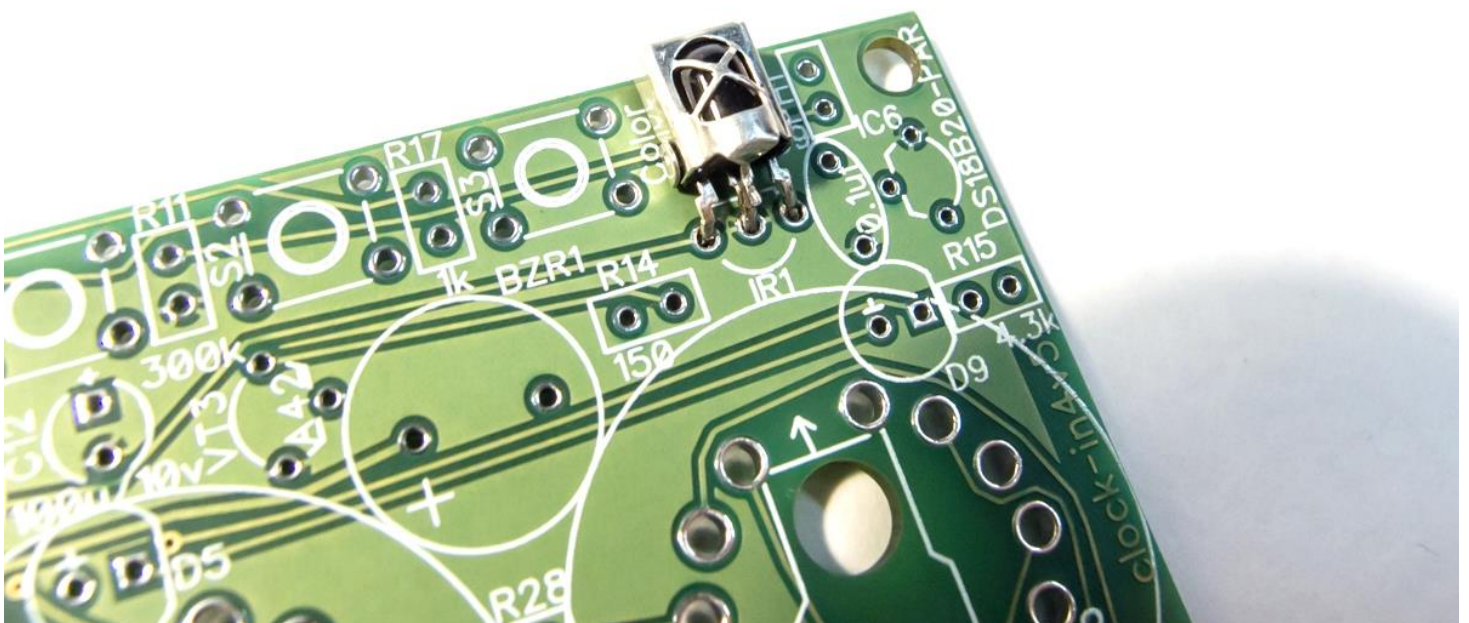

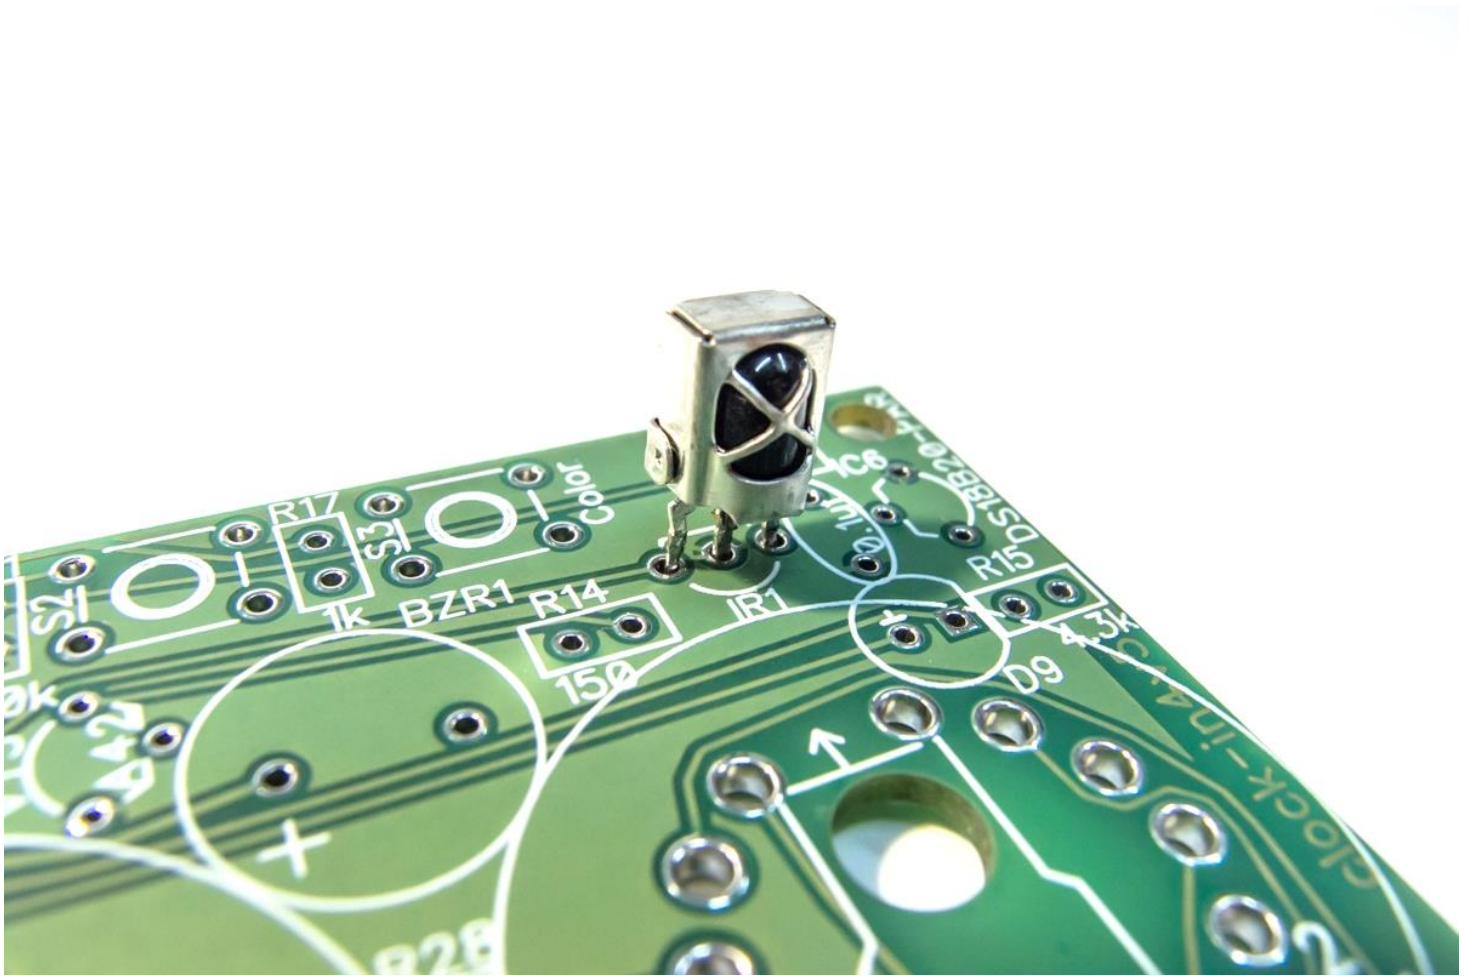

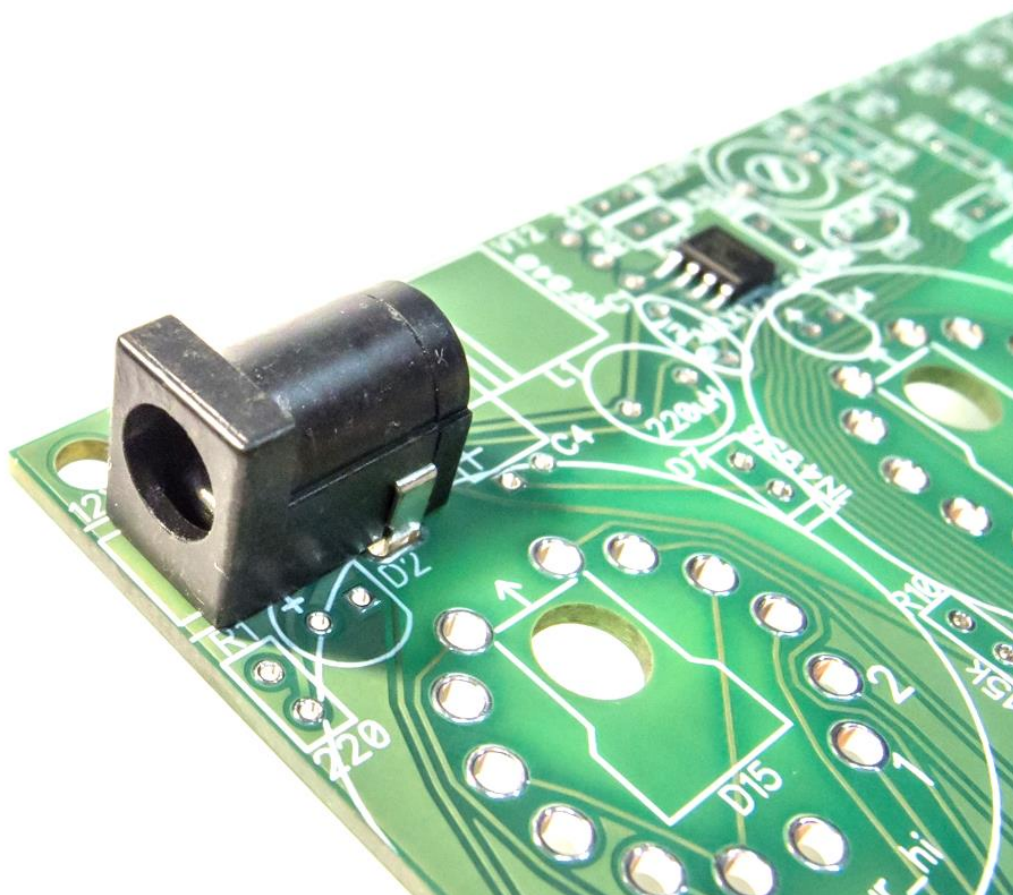

15) Place 2 INS-1 tubes. See the glass dot on INS tube; it should be placed to '+' on PCB.

16) Place IR-receiver:

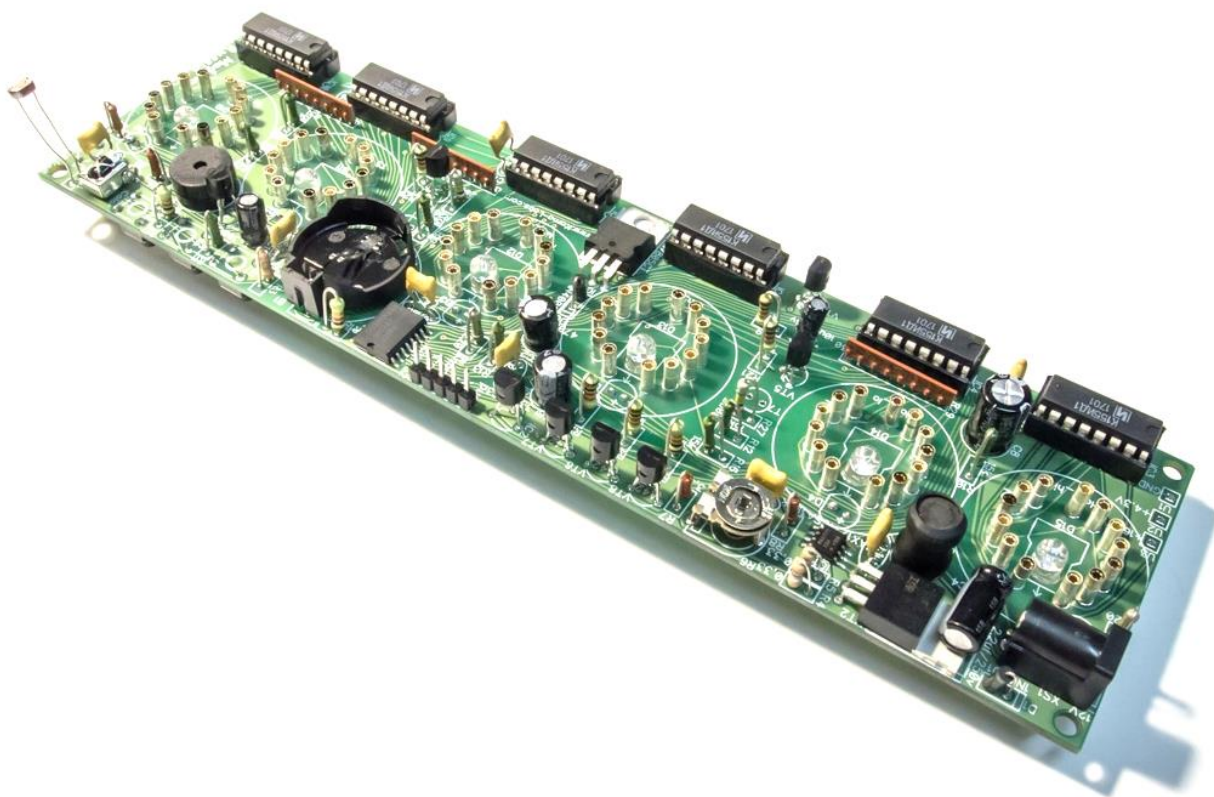

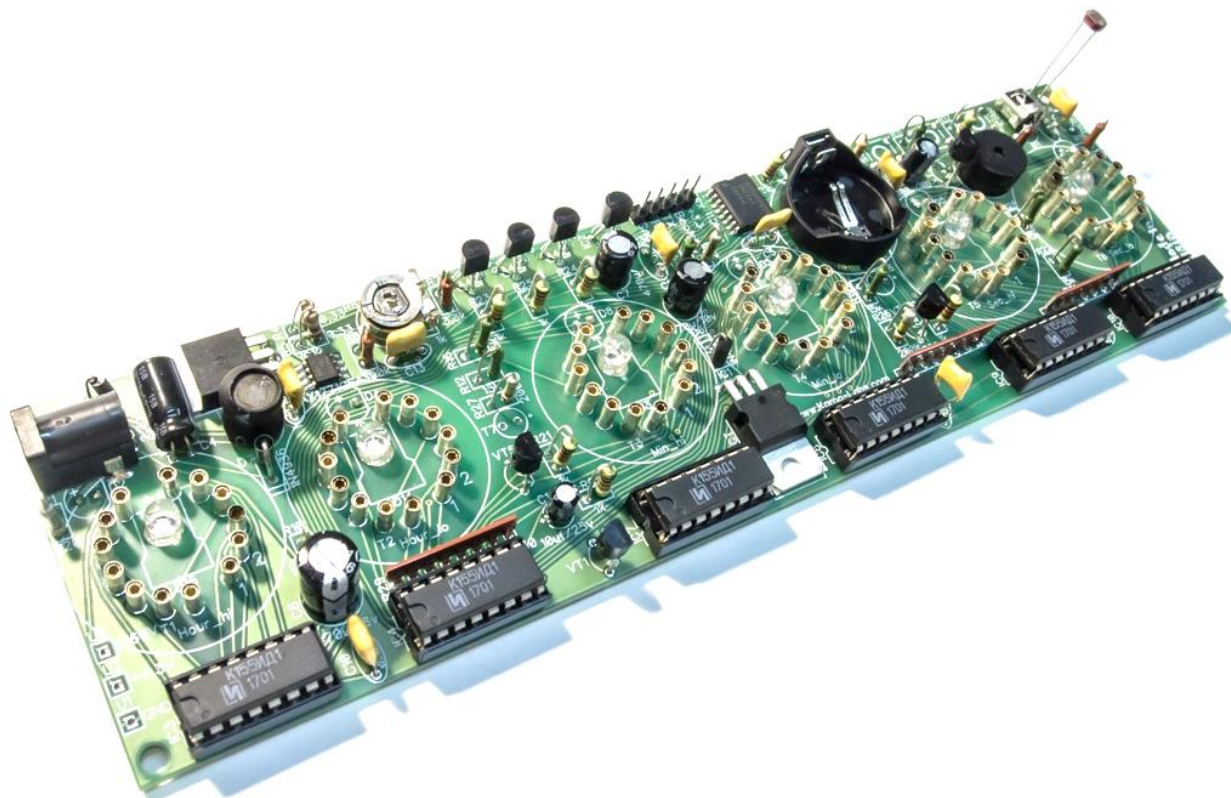

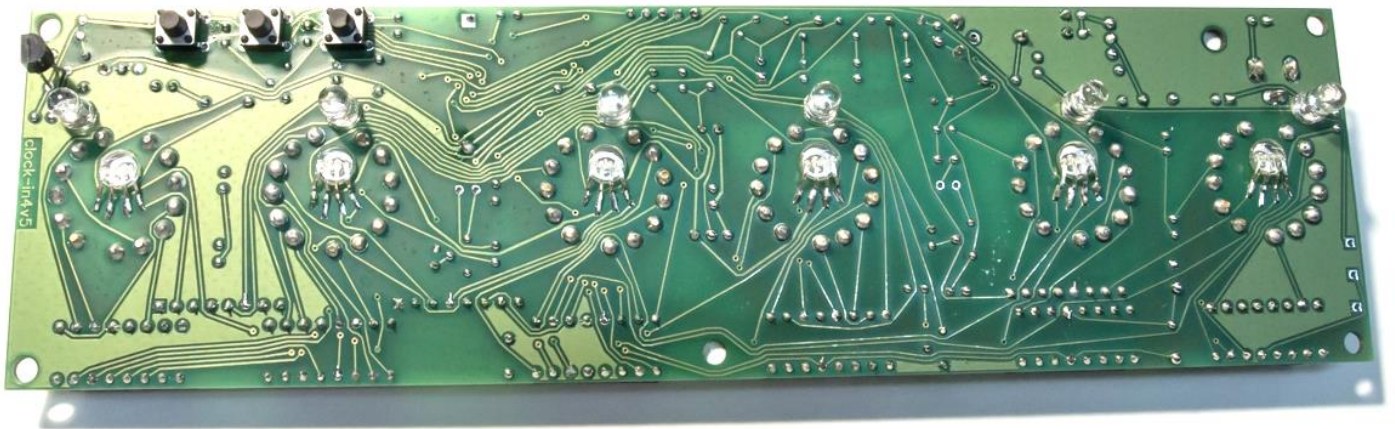

17) Install power plug:

18) The assembled board should look like this:

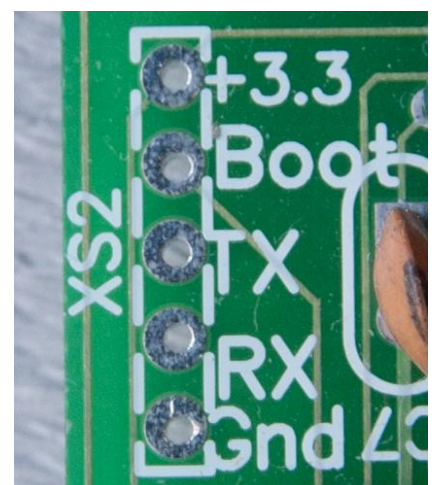

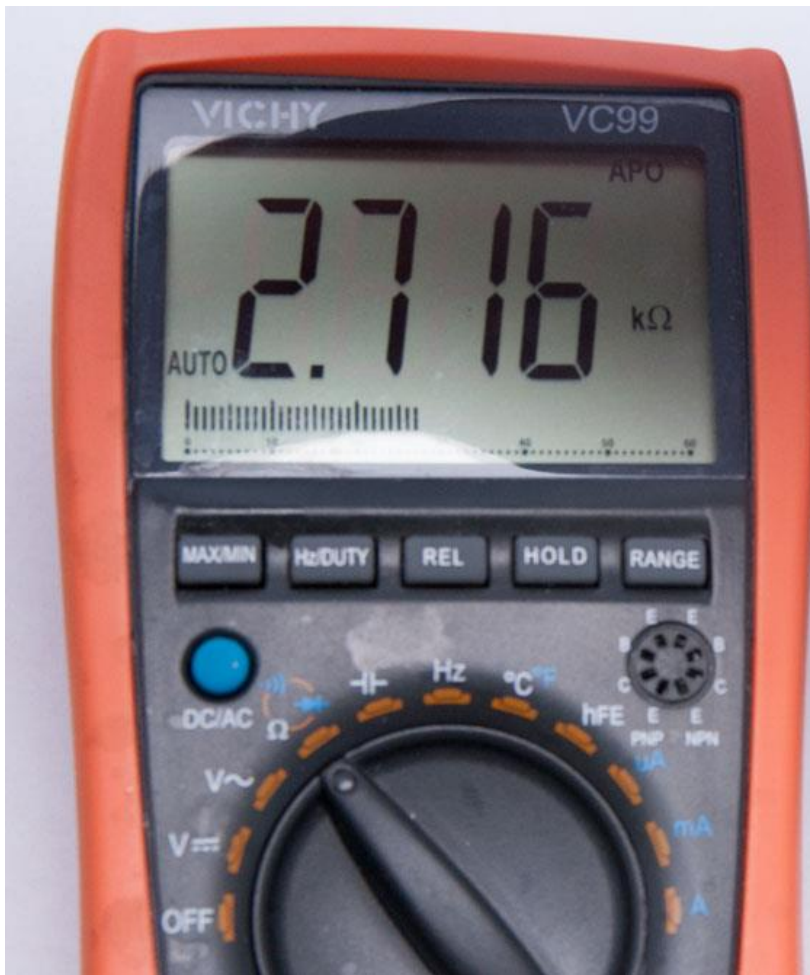

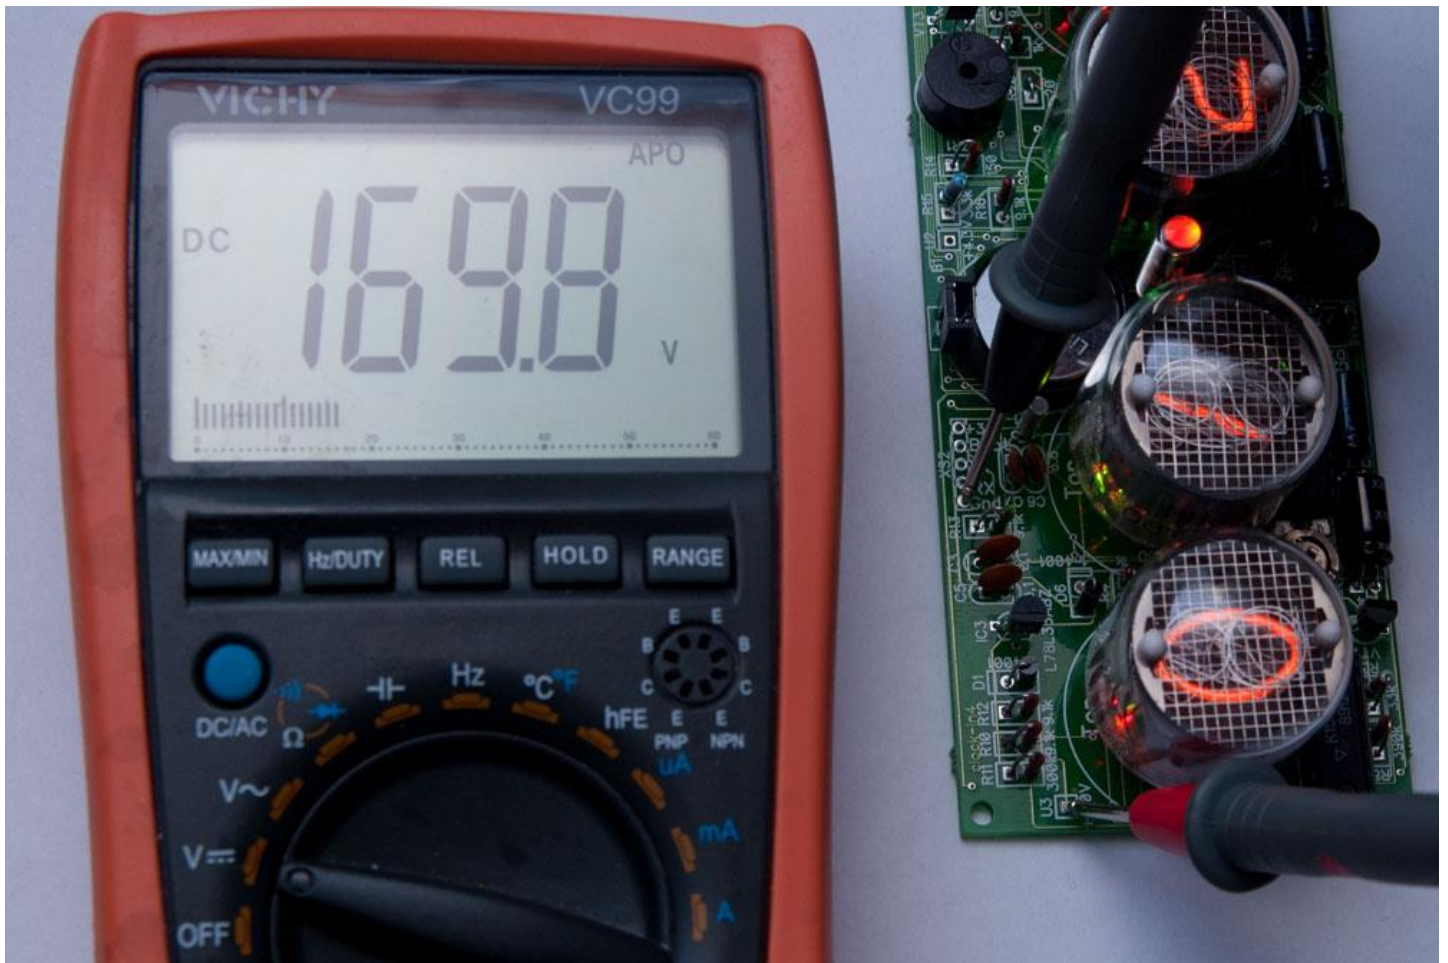

19) Then check the resistance between GND and +3.3V pins of XS2 again. It should not be lower than 1kOhm.

20) Then plug 12V DC adapter. The microcontroller starts work and you will hear short melody. If it not happens, check the 3.3V on XS2 between GND and +3.3 pins.

21) And now check high voltage on U3 pad. It should be ~160-170V. Use R6 potentiometer for adjusting.

CONGRATULATIONS!

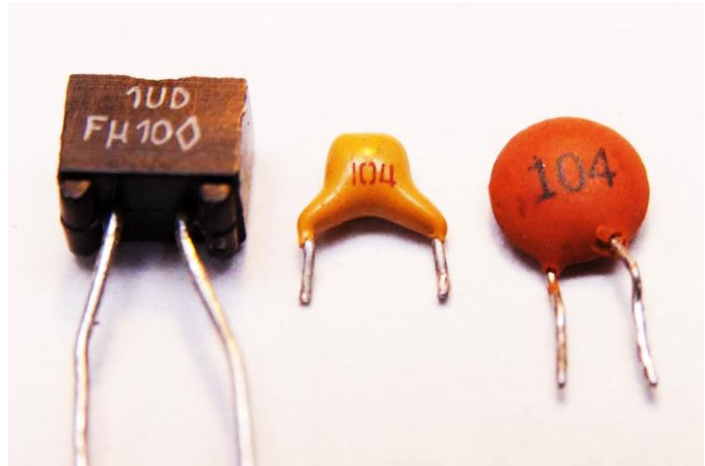

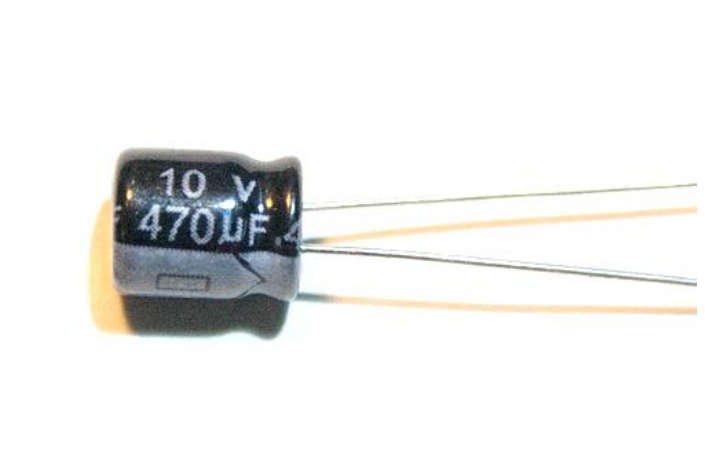

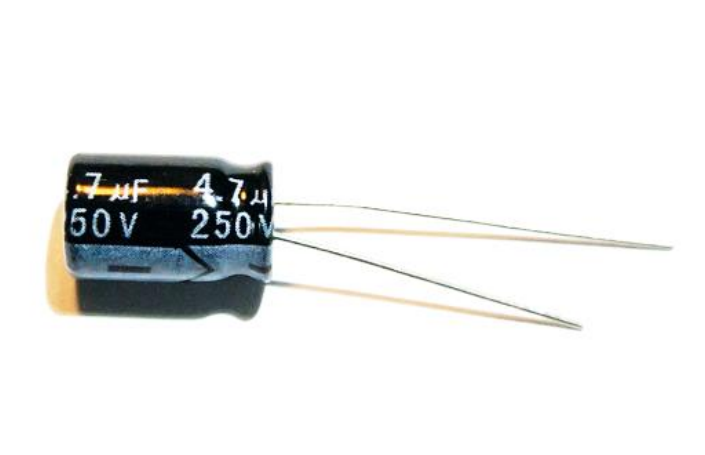

(^ _ ^)

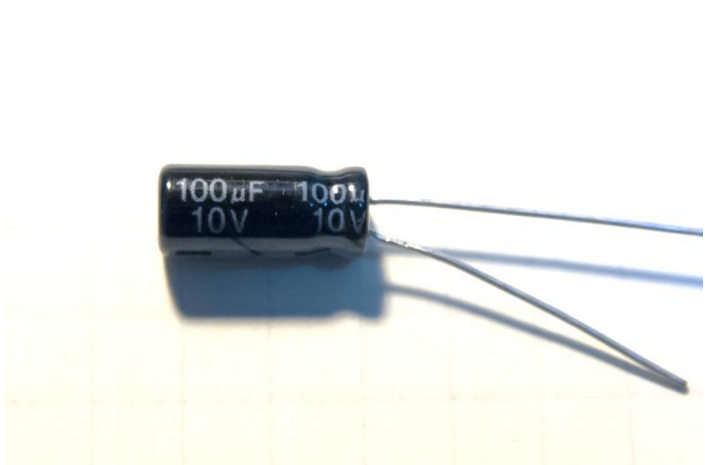

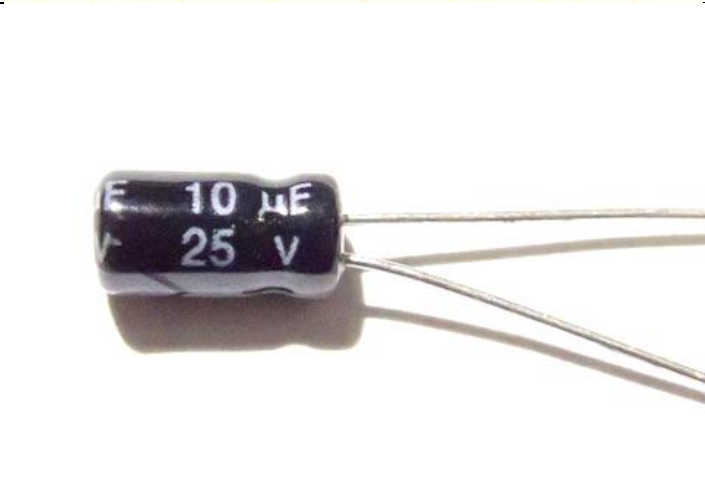

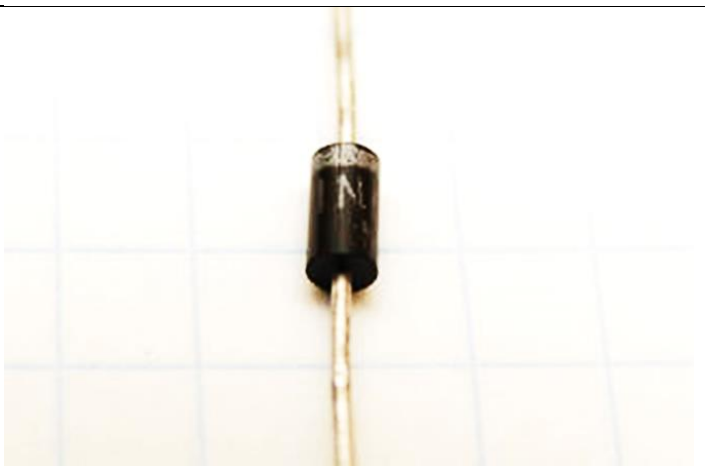

SPECIFICATION

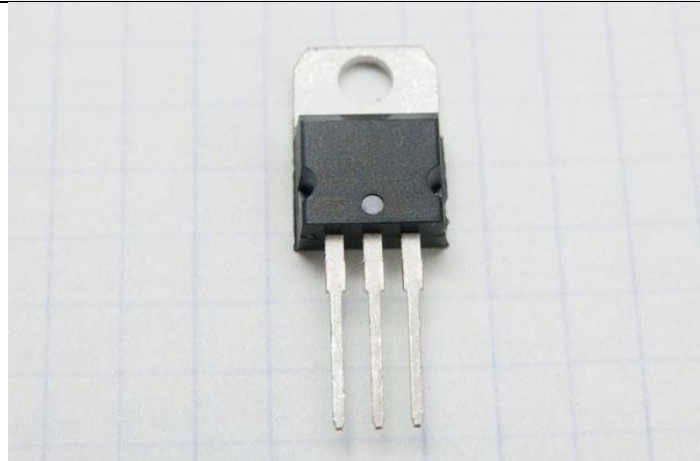

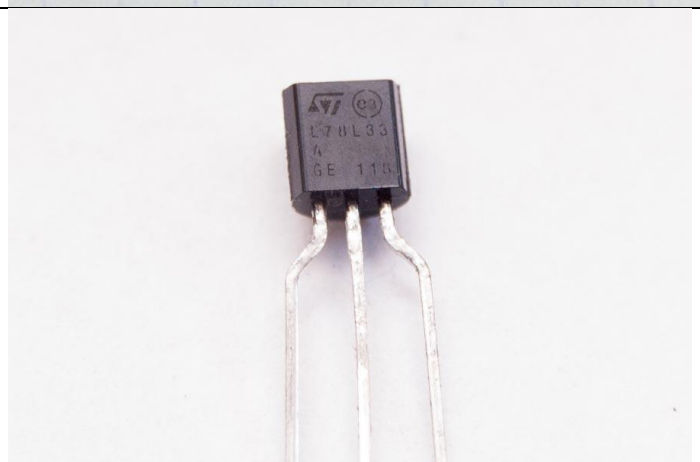

Please note, that elements in kit can be a little different. If you doubt value of element, check it with multimeter.

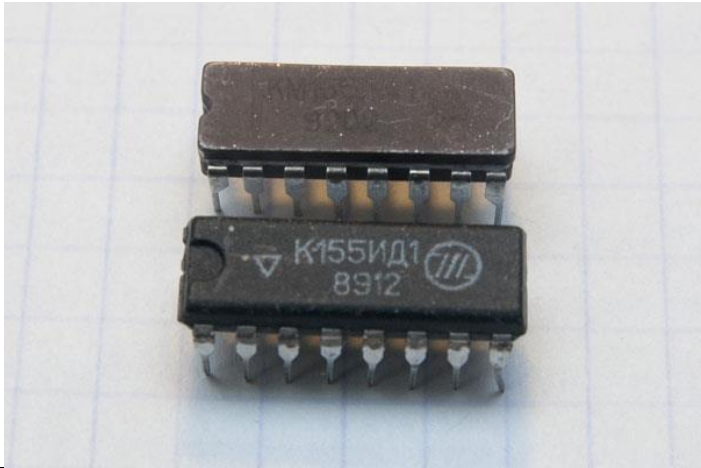

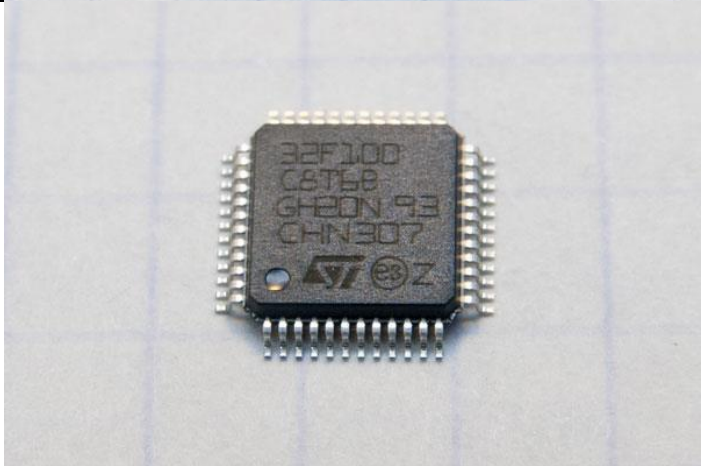

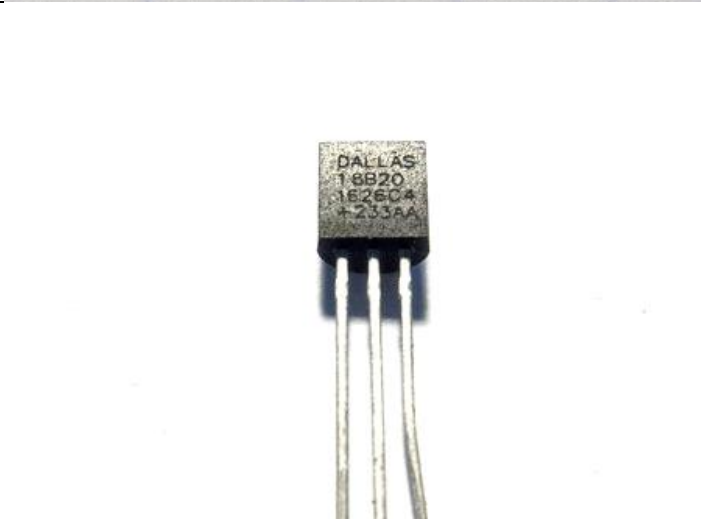

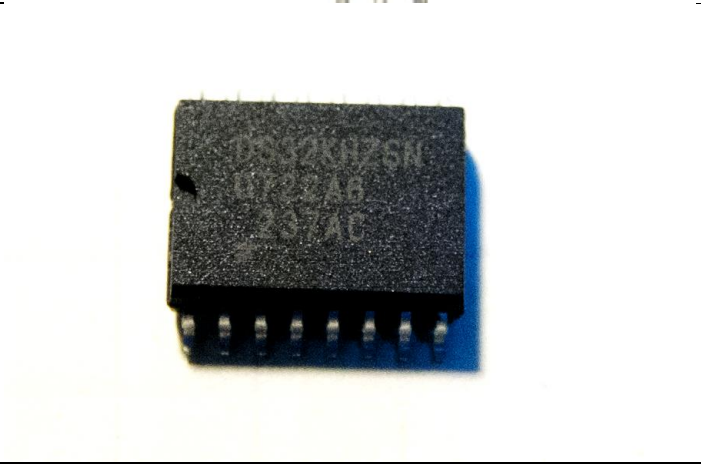

IF VALUE OF ELEMENT IN SPECIFICATION AND ON PCB IS DEFFERENT, PLEASE USE VALUES FROM SPECIFICATION or SCHEMATIC.

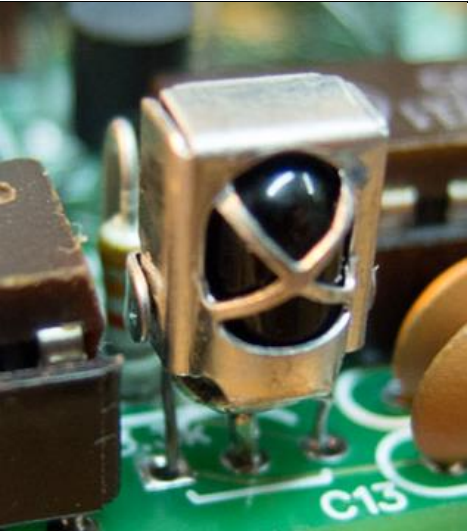

Label	Qty.	Value	Photo
B1		Bat. CR2032	
BZR1		Buzzer	

C1, C13, C3, C5, C6, C9, C10, C11	8	0.1uf	
C2, C7	2	470u/10v	
C4		2.2uf/250v or 4.7uf/250v	
C8		470u/16v
